1 STUDY OBJECTIVE

1.1 PROJECT DESCRIPTION

The North Florida Transportation Planning Organization (North Florida TPO, the TPO) is partnering with Clay County to conduct the Clay County Dirt Road Study. The purpose of this study is to analyze Clay County's public dirt road network and create a strategic plan to prioritize paving of public and prescriptive dirt roads.

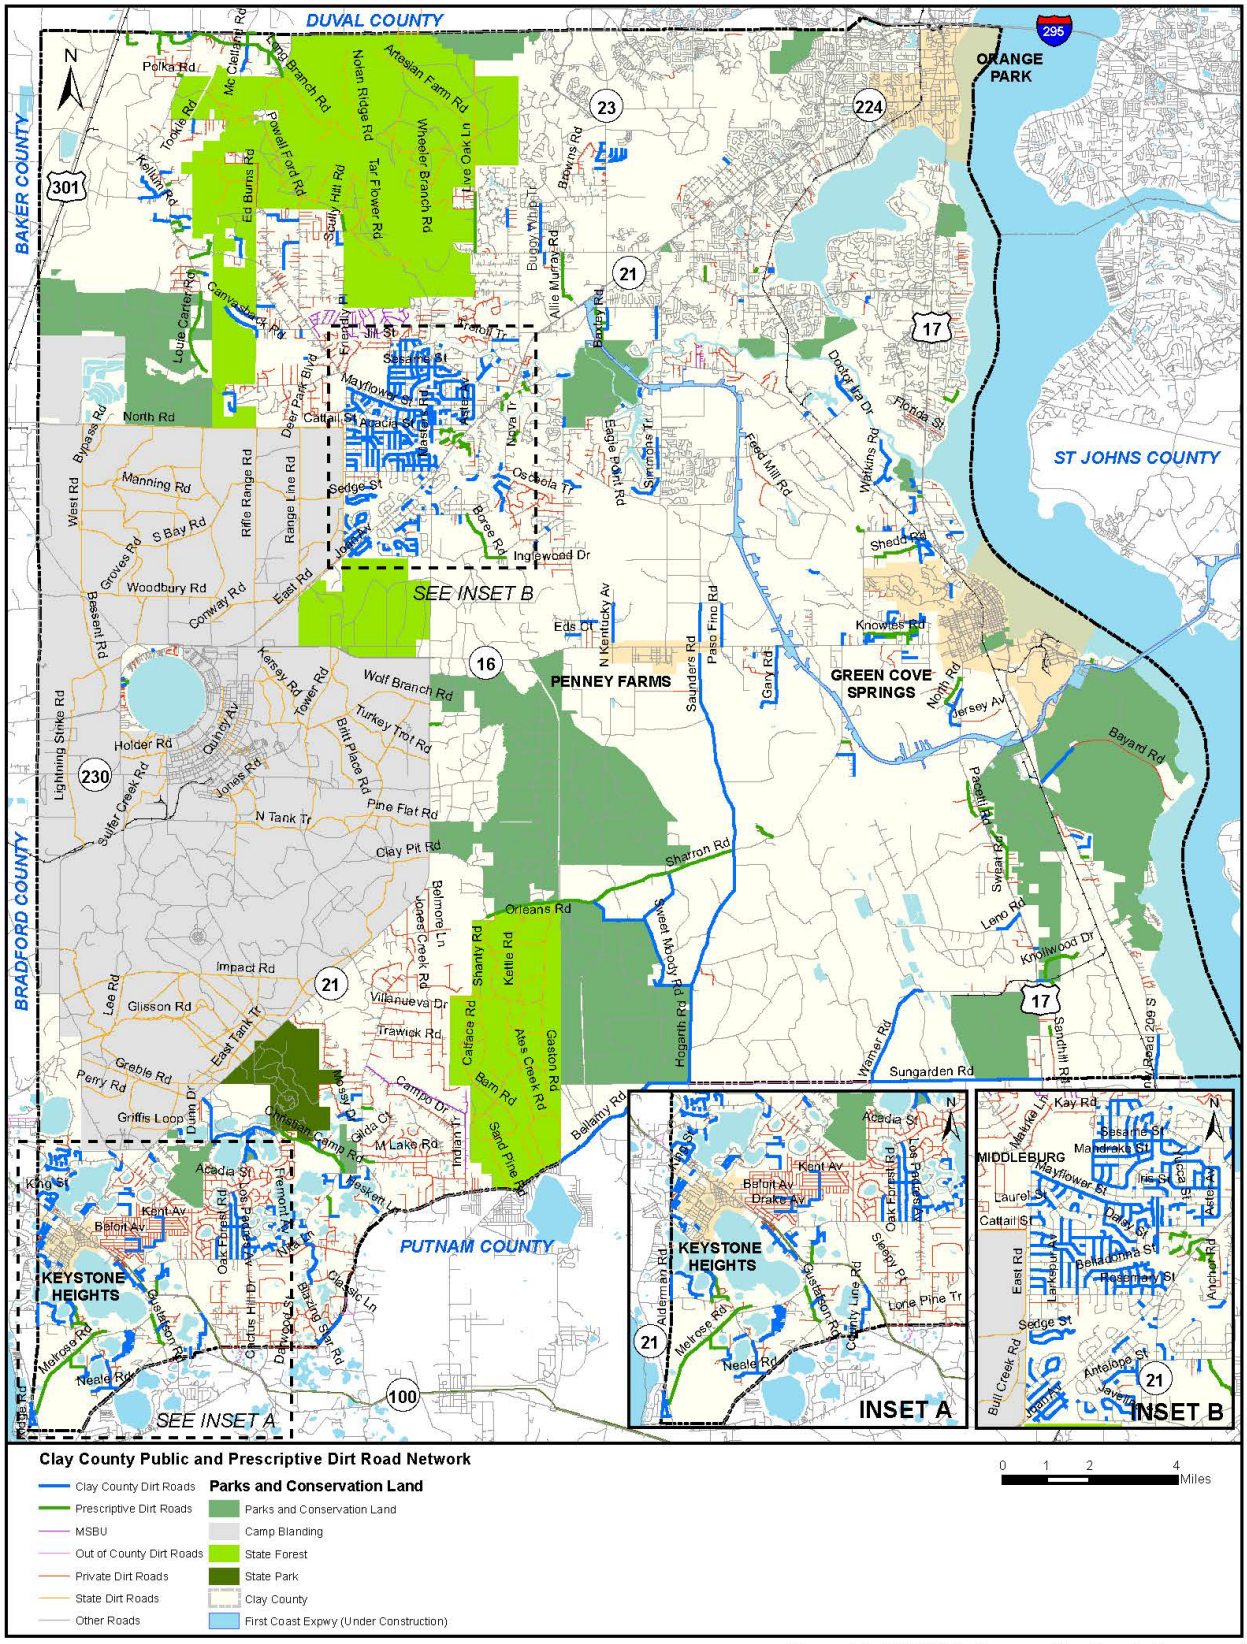

The entire dirt road network in Clay County is identified in Figure 1. There are six classifications of dirt roads within the County, as listed below. The study focuses only on public dirt roads and prescriptive dirt roads, which are defined as *a road easement right granted when one entity uses or accesses the property of another for a specific purpose, for a defined period, without consent or maintained*.

- **Clay County (Public)**
- **Prescriptive**
- Municipal Service Benefit Unit (MSBU)
- Out of County
- Private
- State

Christian Camp Rd in Keystone Heights is a prescriptive dirt road.

This technical report focuses on the expected value of paving each road, using a matrix of quantitative and qualitative metrics. The evaluation matrix can be used as part of the overall Strategic Plan to prioritize roadways that are feasible to pave.

Map updated 11/30/22 - Sources: Clay County Government

Figure 1 – Clay County Dirt Road Network by Maintaining Organization

1.2 STUDY ORGANIZATION

This document serves as the final report for the Clay County Dirt Road Study. It has been developed in phases as listed below.

- Data Collection
- Verification of attribute tables in GIS-based roadway shapefiles
- Roadway Characteristics Inventory (RCI), Crash Data & Safety Assessment
- Dirt Road Evaluation
    - Scoring Criteria
    - Evaluation Matrix

The Roadway Characteristics Inventory, Crash Data & Safety Assessment is a standalone document and is provided as Appendix A. This report develops metrics and scoring criteria to prioritize dirt roads for paving.

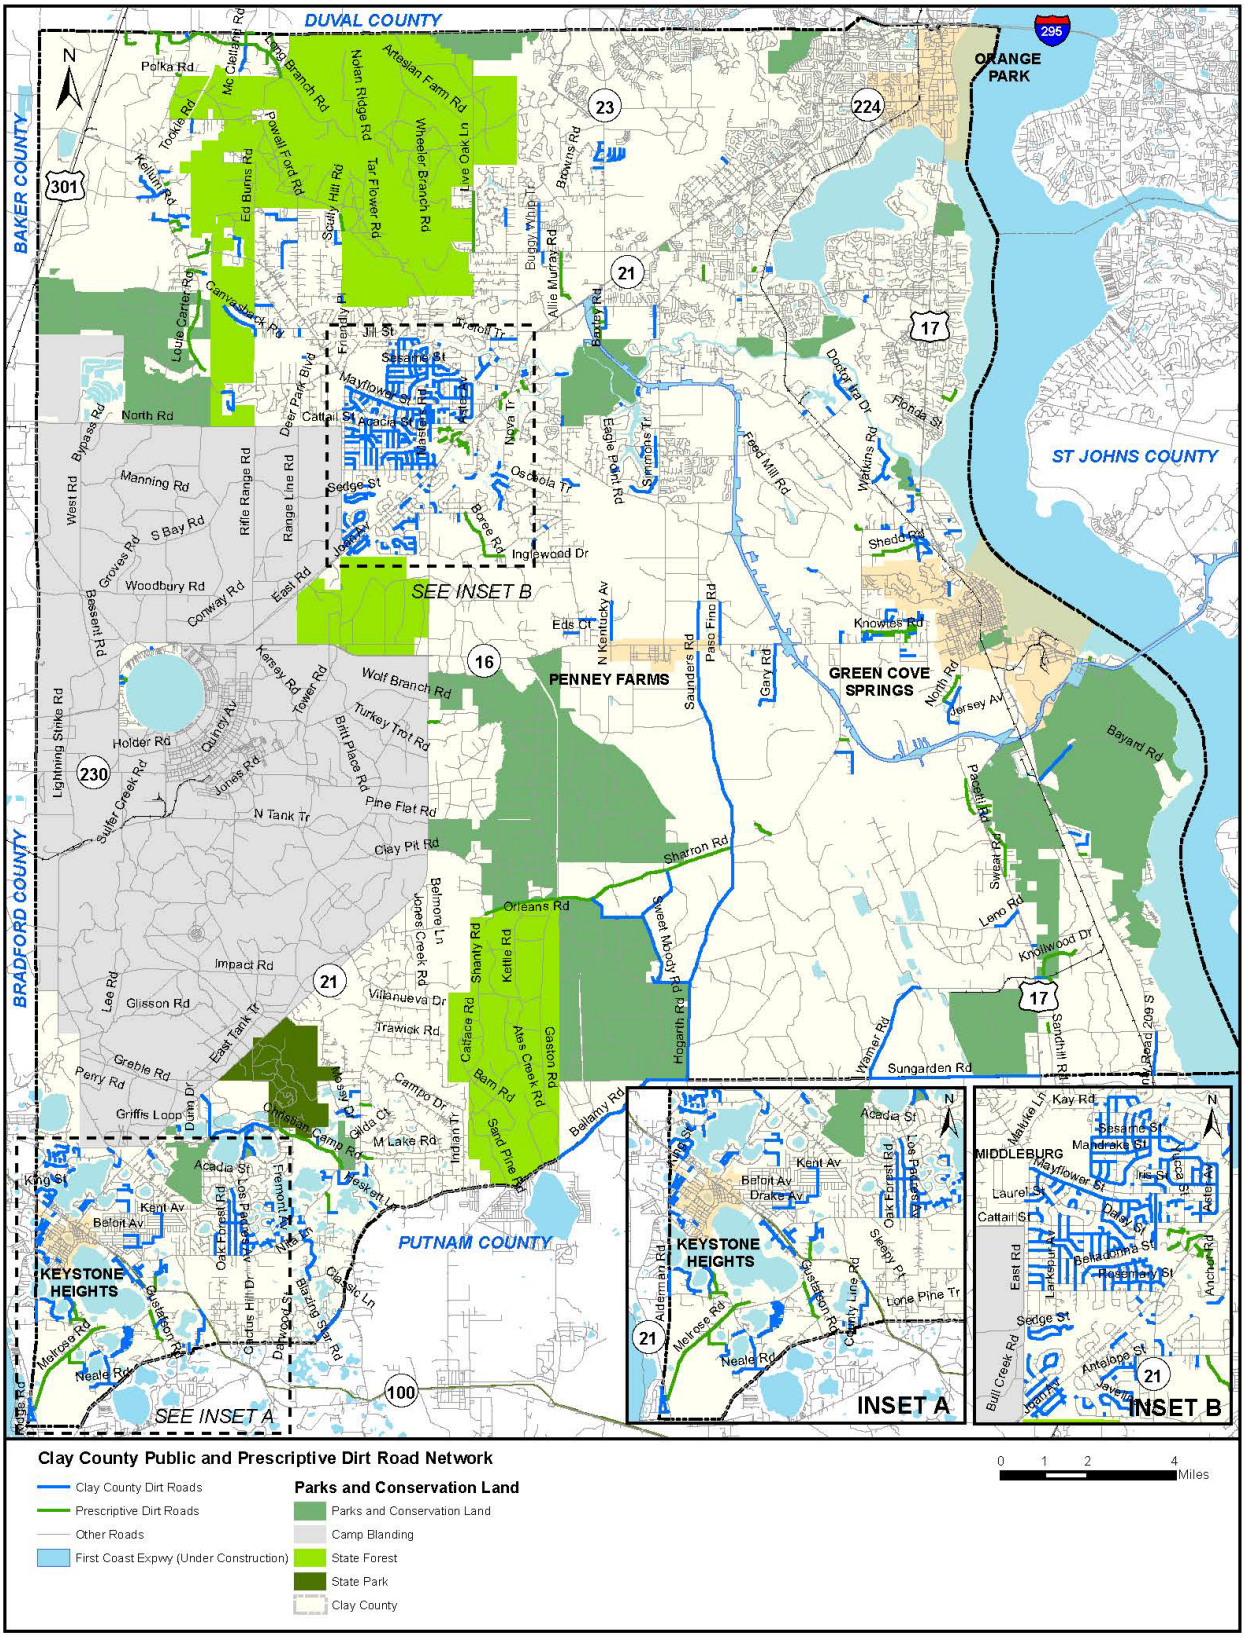

1.3 STUDY AREA DESCRIPTION

The Clay County public and prescriptive dirt road network is displayed in Figure 2. The base RCI public and prescriptive dirt road database for study evaluation consists of the following:

- County Maintained Dirt Roads = 166.91 miles (720 road segments)
- Prescriptive Roads = 43.83 miles (129 road segments)
- Total = 210.74 miles (849 segments)

Through manually validation of the RCI to 2022 conditions, Benesch identified 6.29 miles (39 road segments) as having already been paved and 0.37 miles (3 road segments) that have either been abandoned or no longer exist.

Ninety-eight percent of the dirt roads are within two Commission Districts. Commission District 4 has the greatest number of dirt roads, with seventy-one percent (71%). Commission District 5 is second, with 27% of the dirt roads within Clay County.

Map updated 11/30/22 - Sources: Clay County Government

Figure 2 – Clay County Public and Prescriptive Dirt Road Network

2 DIRT ROAD EVALUATION

2.1 COUNTY STANDARD PAVED ROAD TYPICAL SECTION

For low volume dirt roads, the standard typical section consists of:

- 60-foot minimum right of way
- 2, 11-foot lanes (22 feet total width)
- 6” lime rock base
- 1-1/2” asphalt
- 6-foot stabilized shoulder
- 13 feet for drainage swale (4:1 side slopes)

Ideally, the paved road will be centered within the ROW and not offset.

2.2 EVALUATION CRITERIA AND SCORING

Benesch identified a mix of quantitative and qualitative metrics to evaluate the need for and benefits of paving each road. Prioritization of each roadway is evaluated and scored using seven criteria, which are described in the following sections. Table 1 provides a summary of the criteria with the scoring for each.

2.2.1 Right of Way

The minimum right of way width needed is 60 feet. Of the 849 road segments reviewed, 577 (68%) meet this criterion (554 county owned, 23 prescriptive). Roads with adequate ROW receive one point in the scoring matrix.

2.2.2 Ownership

County owned roads are prioritized over prescriptive and other types of dirt roads, as the ROW is open for public access and dedicated to the County through a plat. For non-County roads, such as prescriptive roads, abutting property owners must grant the necessary right of way and/or easements for the finished roadway to meet the county standard.

County owned roads which meet the right of way criteria receive one point in the scoring matrix. For prescriptive roads, the County will need to work with adjacent land owners to acquire the ROW prior to paving.

Table 1 – Evaluation Criteria and Scoring

Criteria	Description	Scoring	Notes
Right of Way	Meets minimum width (60 feet)	1 = Adequate	
		0 = Insufficient	
Ownership	County Owned	1 = County	
	Prescriptive	0 = Insufficient	Need to acquire prescriptive ROW prior to paving.
Maintenance Difficulty	Location of road; distance from equipment and borrow pit	5 = Yes	Identified by Clay County Public Works staff
		1 = No	
Cut Through Road	Serves as a collector road	1 = Yes	Identified by Clay County and Benesch staff
		0 = No	
Community Access	Educational access (bus route or school on dirt road)	1 point per category (max= 3)	
	Public recreational area access (recreational area on dirt road)		
	Municipal resource access (Town Hall, Fire Department, DPW, etc.)		
Impact on Public Health and Safety	Emergency evacuation route (aka main connection)	1 point per category (max= 2)	
	Vulnerable population (% poverty by census tract)		Dirt road is located within a census tract with 12% or more of the population below the poverty level
Average Annual Maintenance Costs	Cost per Mile = $4,100; roads are graded 17 times per year (every 3 weeks)	0 = paved	For each road, the ranking considers only the highest scoring segment.
		1 < $20,000 per year	
		2 = $20,000 - $40,000 per year	

Criteria	Description	Scoring	Notes
		3 = $40,000 - $60,000 per year	
		4 = $60,000 - $80,000 per year	
		5 = $80,000 - $100,000 per year	
		6 > $100,000 per year	

2.2.3 Maintenance Difficulty

Clay County staff identified the dirt roads which are considered the most difficult to maintain. “Difficulty” refers to the ability to access a dirt road with equipment (dump truck, low boy with grader); distance from the pit/equipment yard; and roads that require crews to use congested routes to get there, such as Blanding Boulevard or US 17.

Roads with a high maintenance difficulty are scored as “5” and are identified in Figure 3. “Easy” to maintain roads receive a score of “1.”

A Clay County crew grades Chicory St, which is considered a difficult to maintain road.

2.2.4 Cut Through Roads

Dirt roads that serve as a collector for residential neighborhoods or are used as a cut through between paved streets are depicted in Figure 4. These roads were qualitatively identified by Clay County and Benesch staff. Examples include Buggy Whip Trail, Lakeview Street, Melrose Road and Sharron Road. Roads identified as cut through roads receive a score of “1.”

2.2.5 Community Access

Dirt roads that provide community access, such as to schools, parks and/or municipal resources, receive up to 3 points. Roads may receive a score of “1” for providing access in each of the following categories, which are depicted in Figure 5 through Figure 7.

- Educational access (bus route or school on dirt road)
- Recreational area access (recreational area on dirt road)
- Municipal resource access (Town Hall, Fire Department, Public Works yard, etc.)

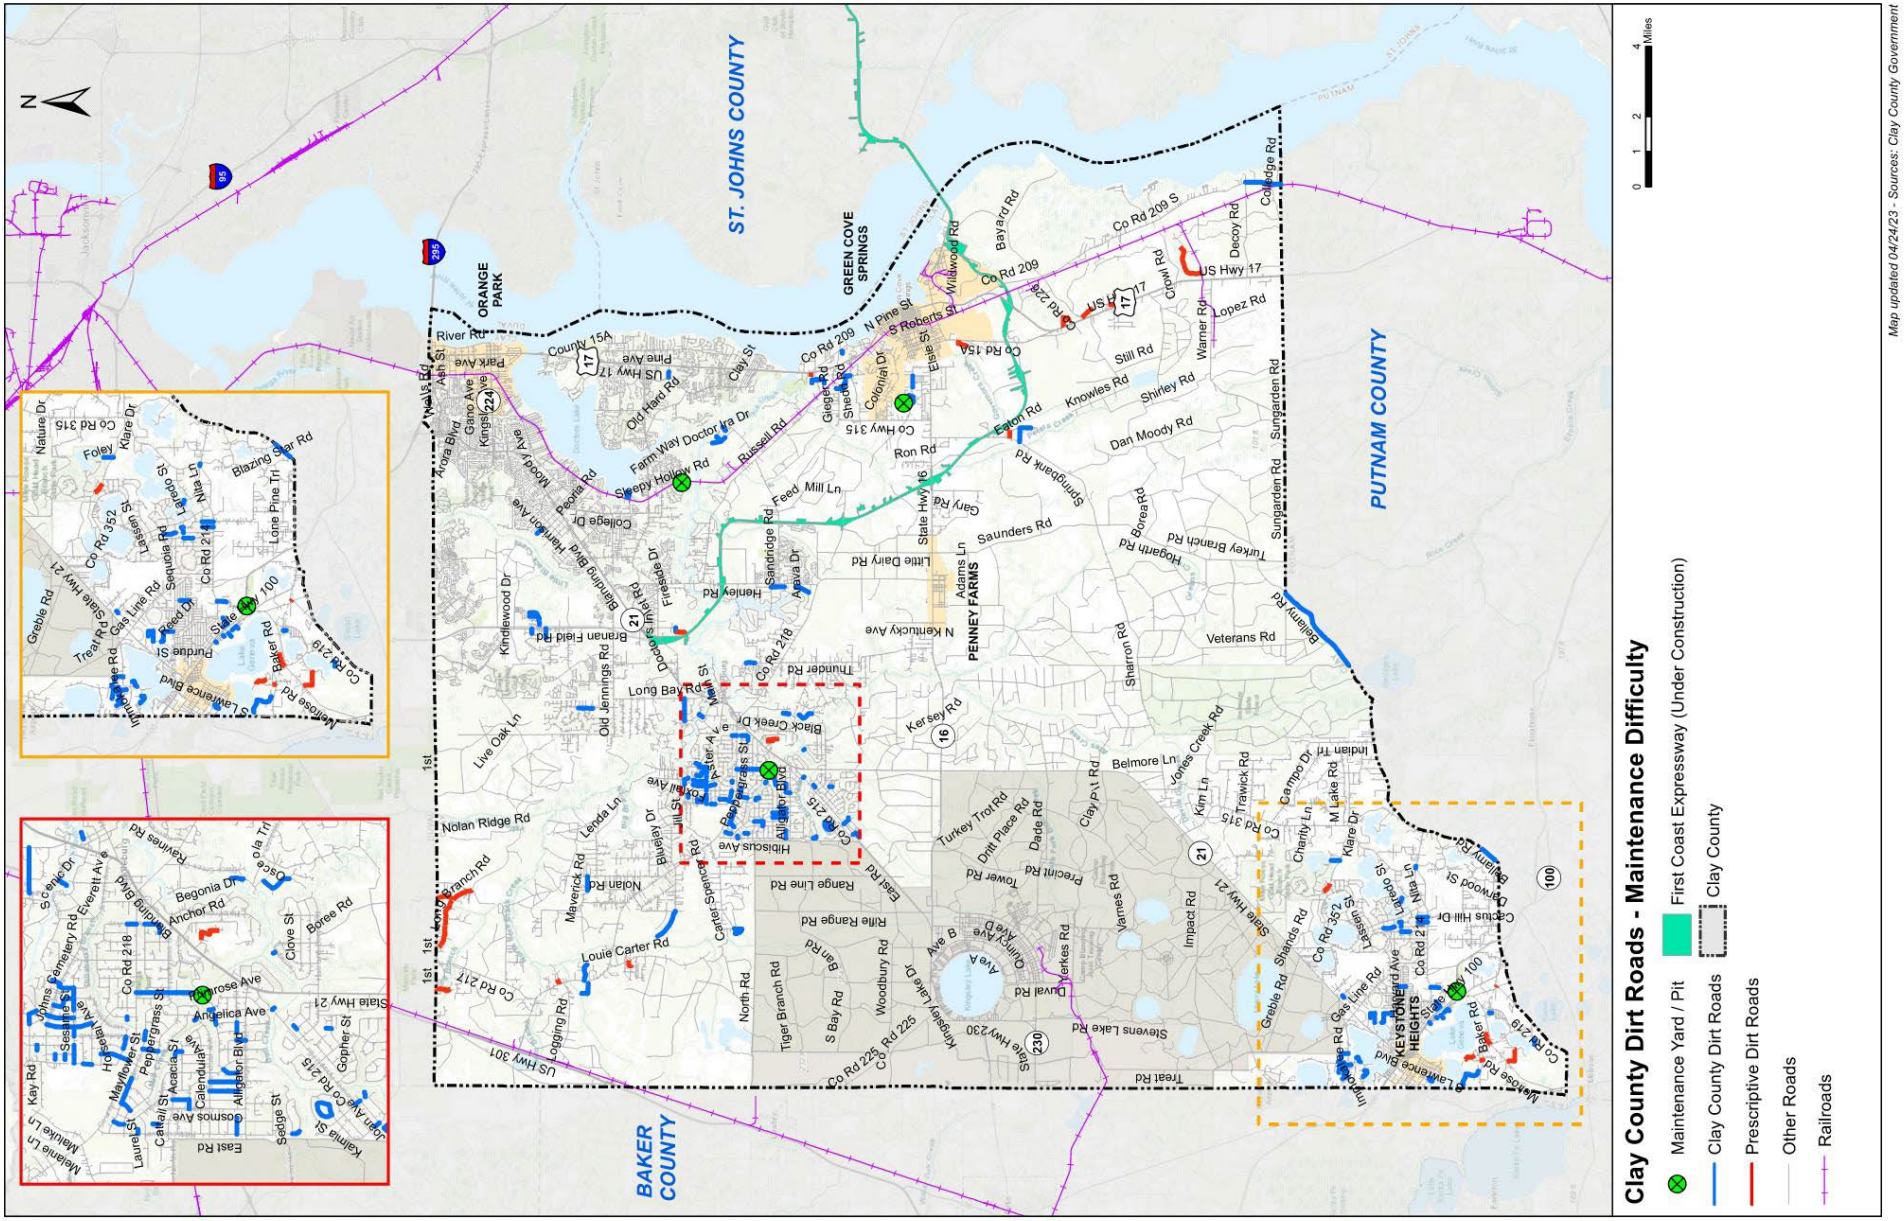

Figure 3 – Maintenance Difficulty

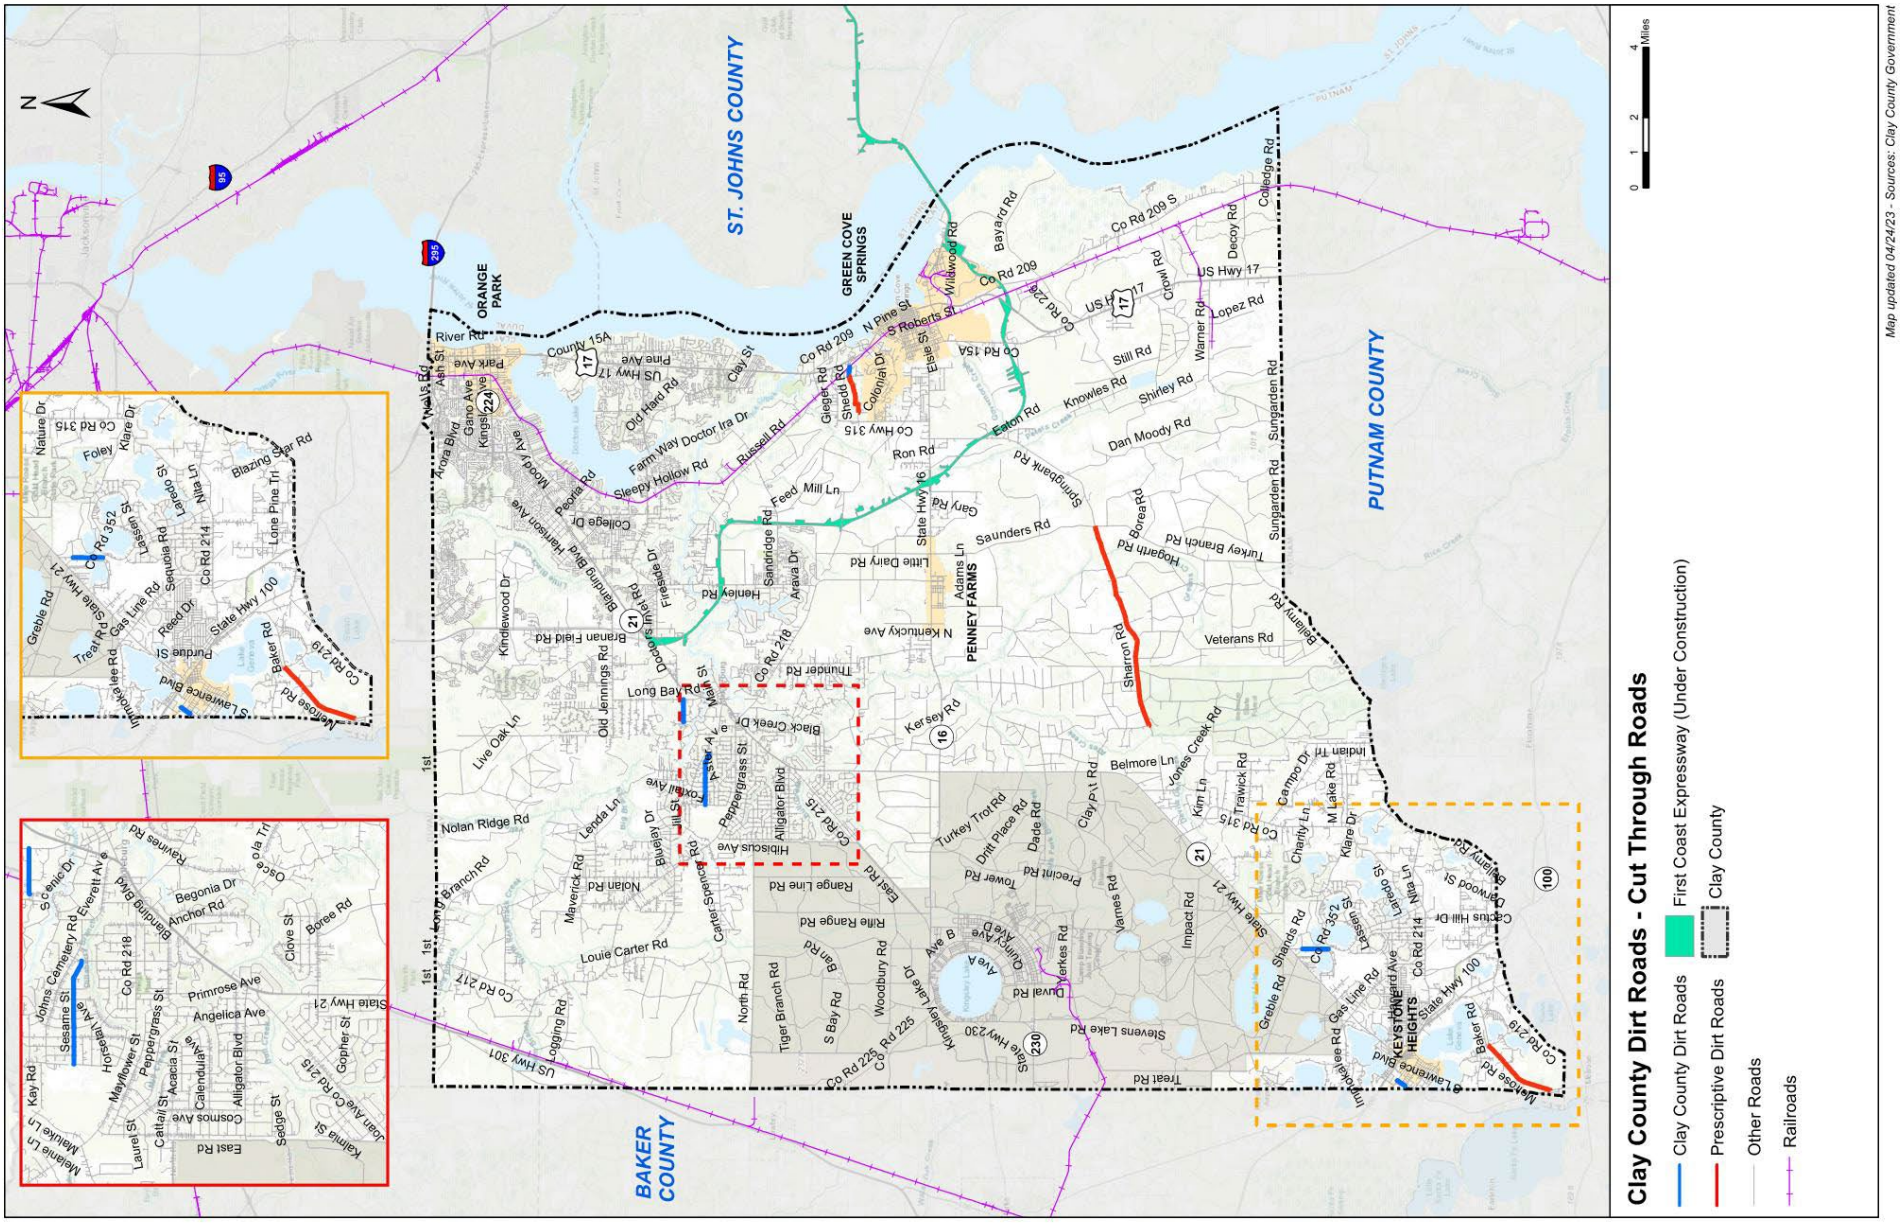

Figure 4 – Cut Through Roads

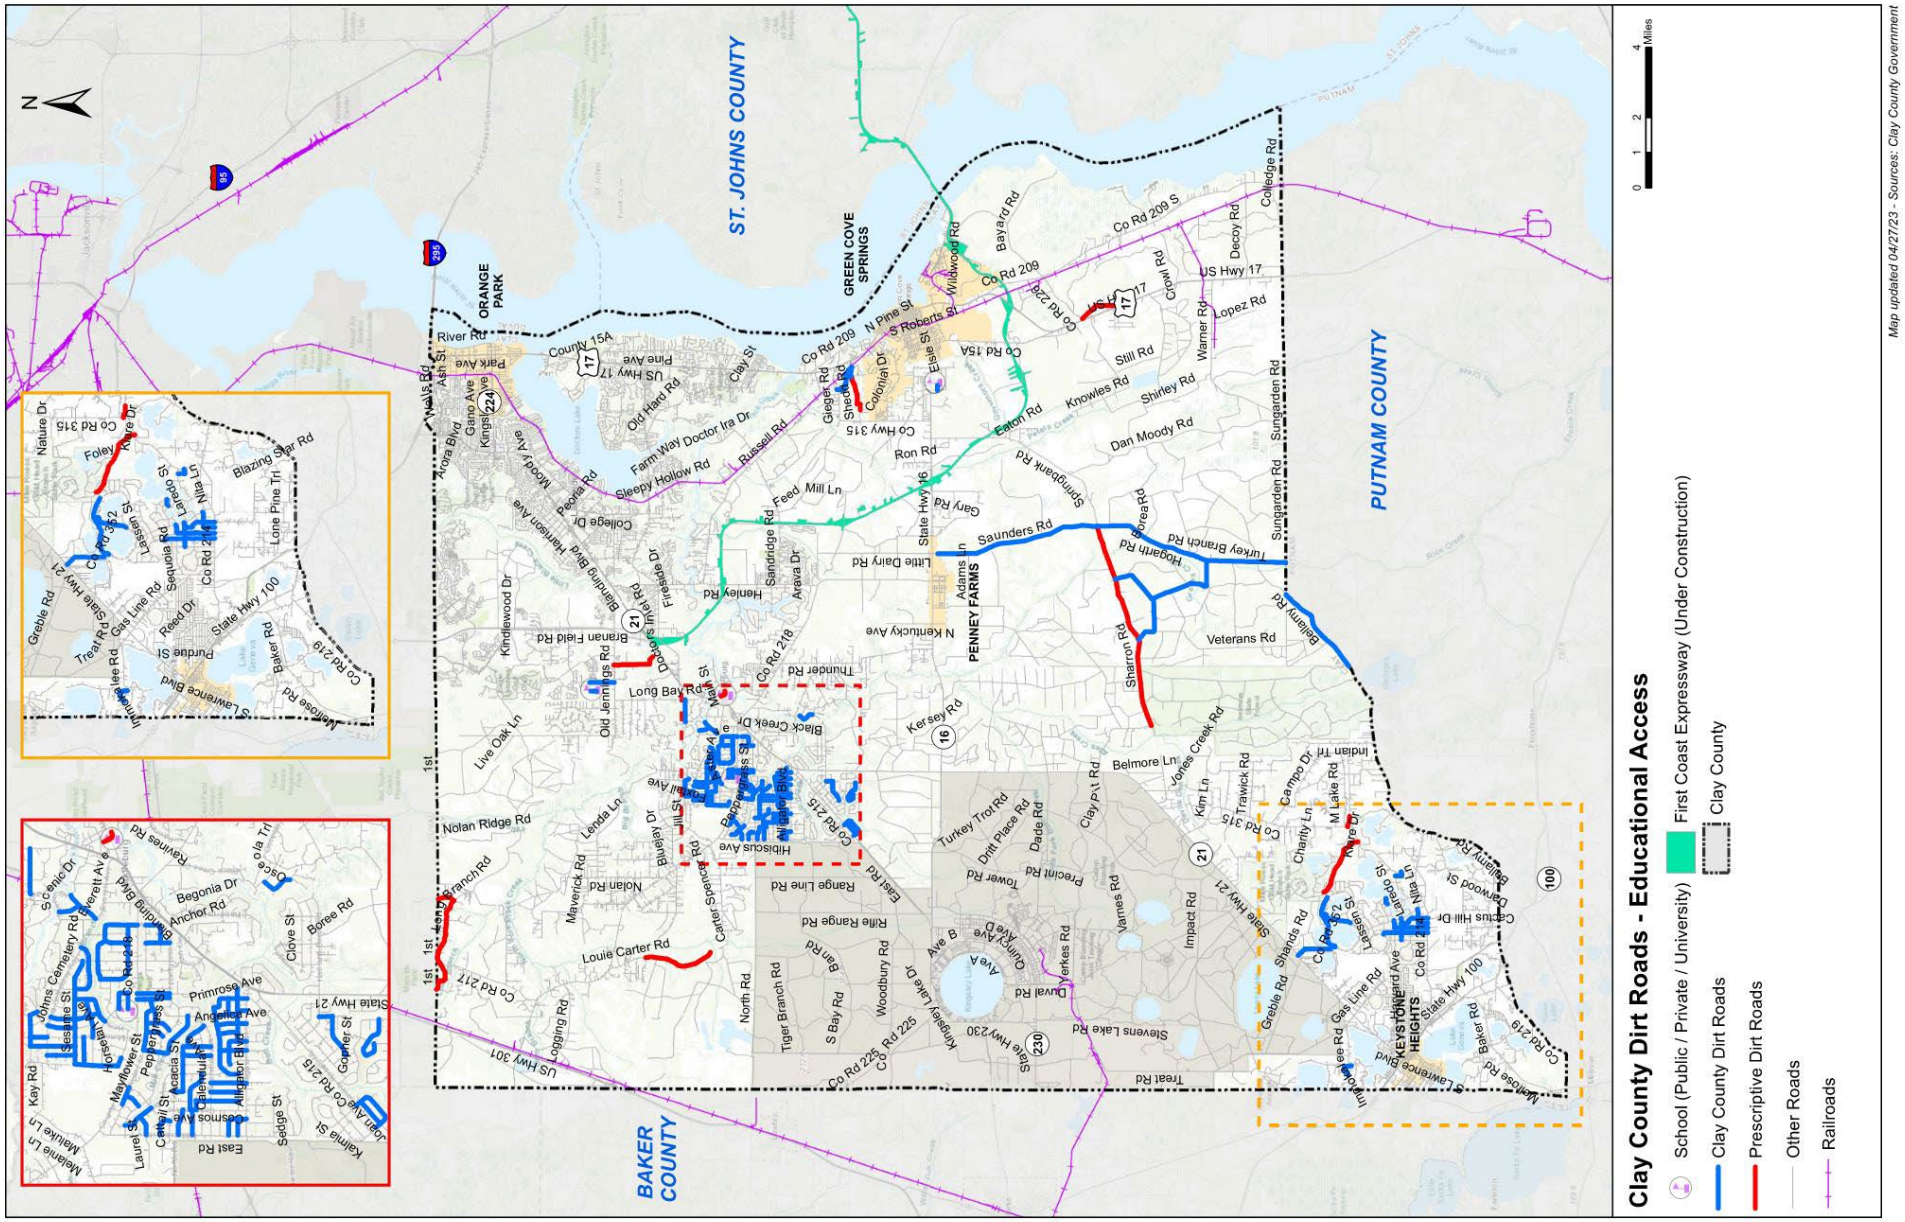

Figure 5 – Educational Access

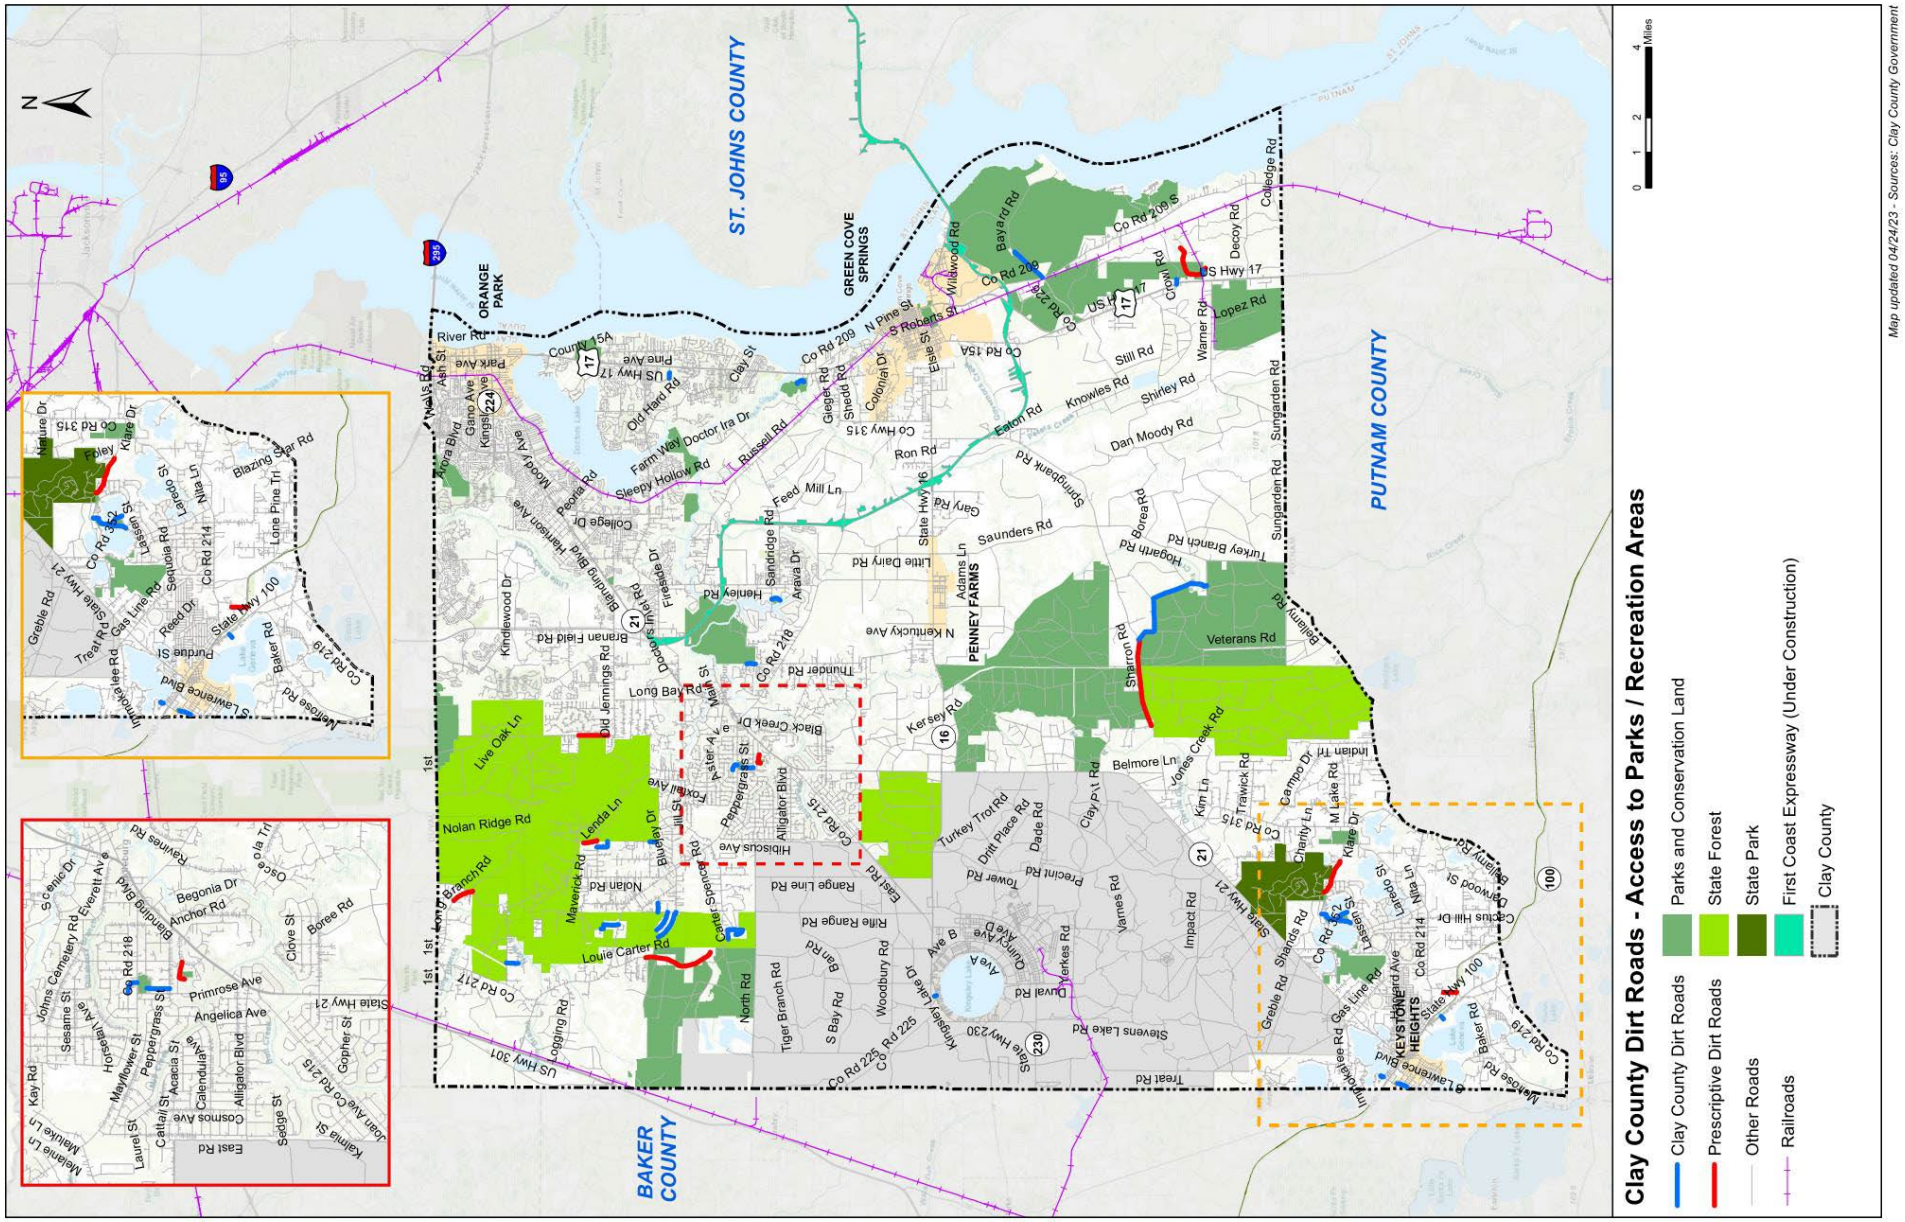

Figure 6 – Recreational Area Access

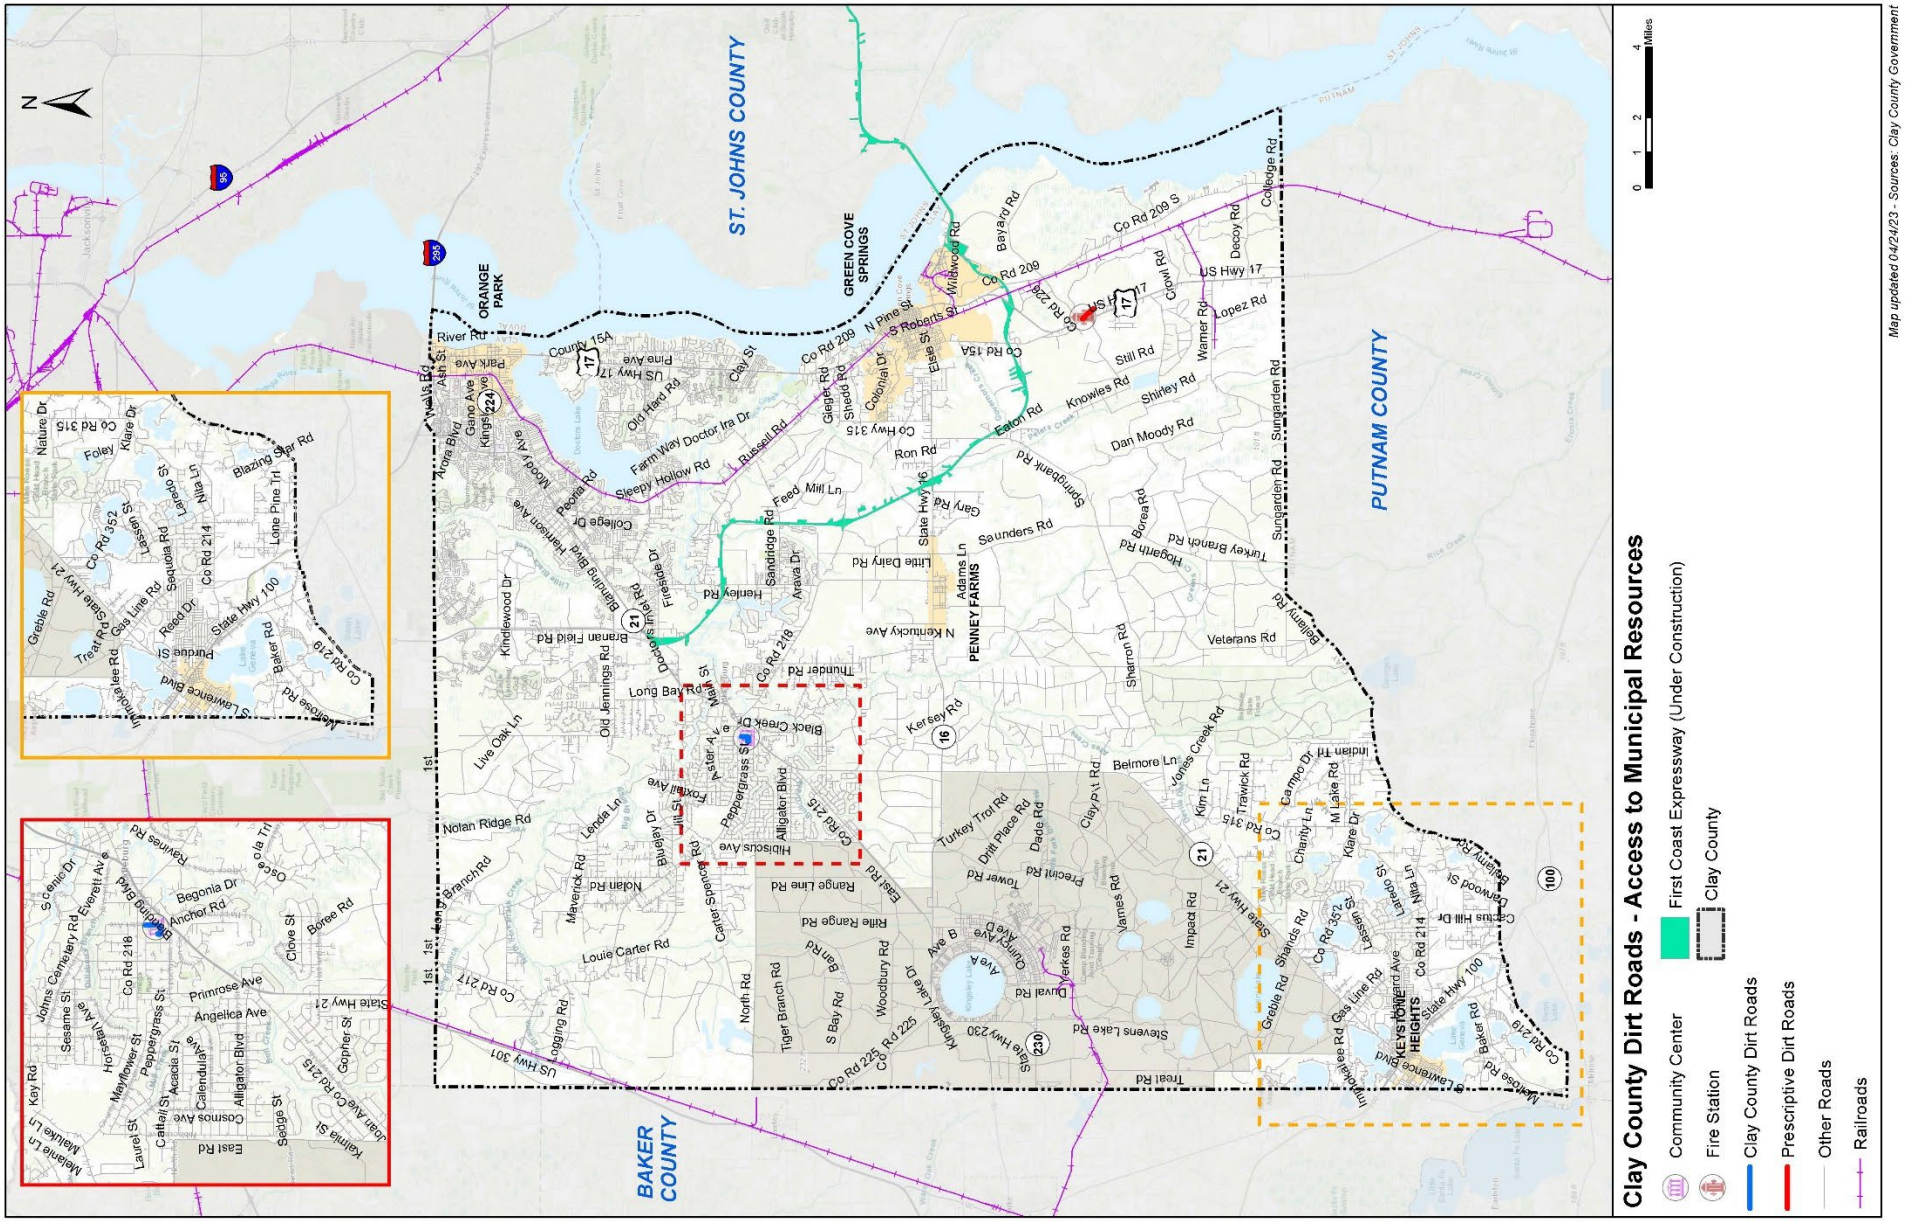

Figure 7 – Municipal Resource Access

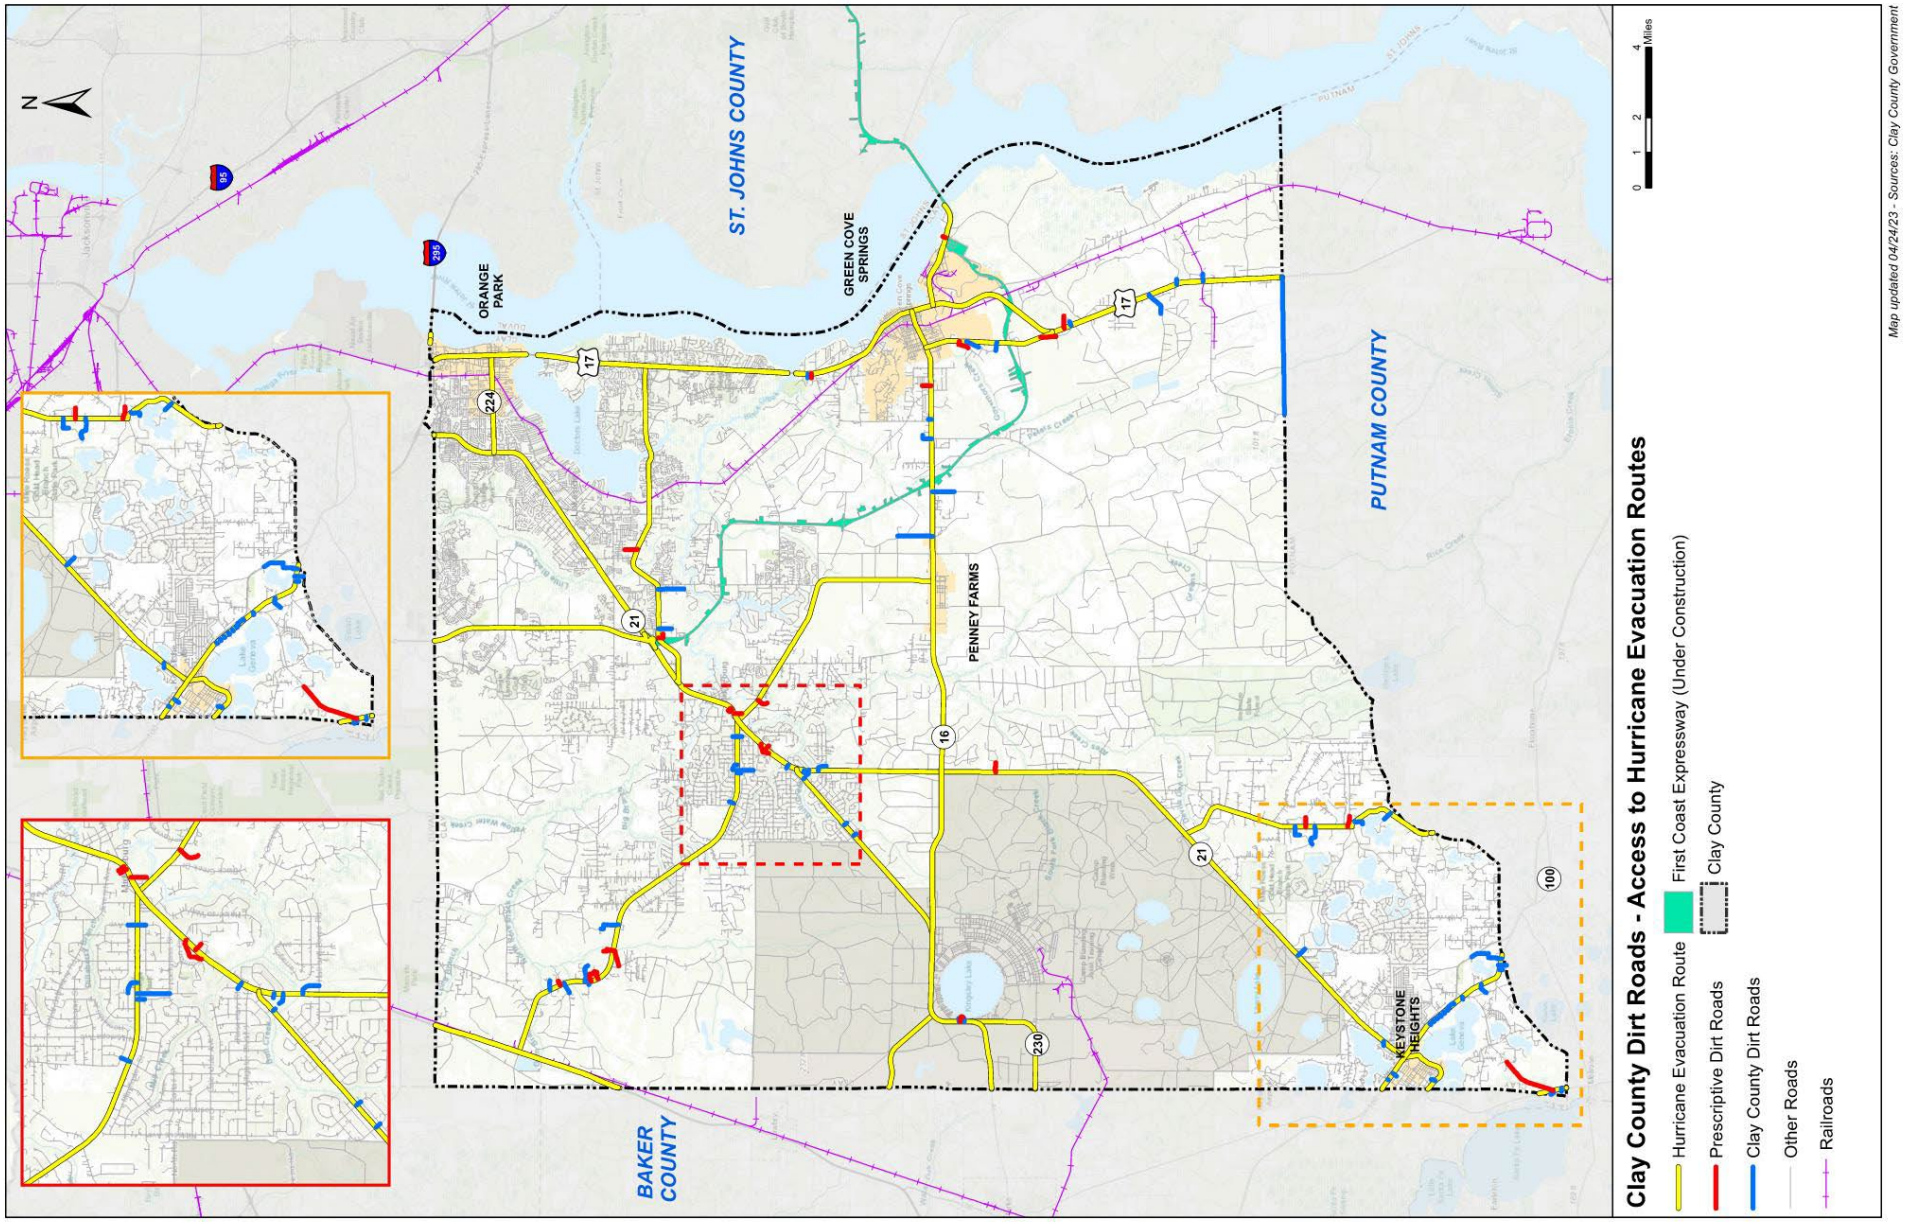

Figure 8 – Evacuation Route Access

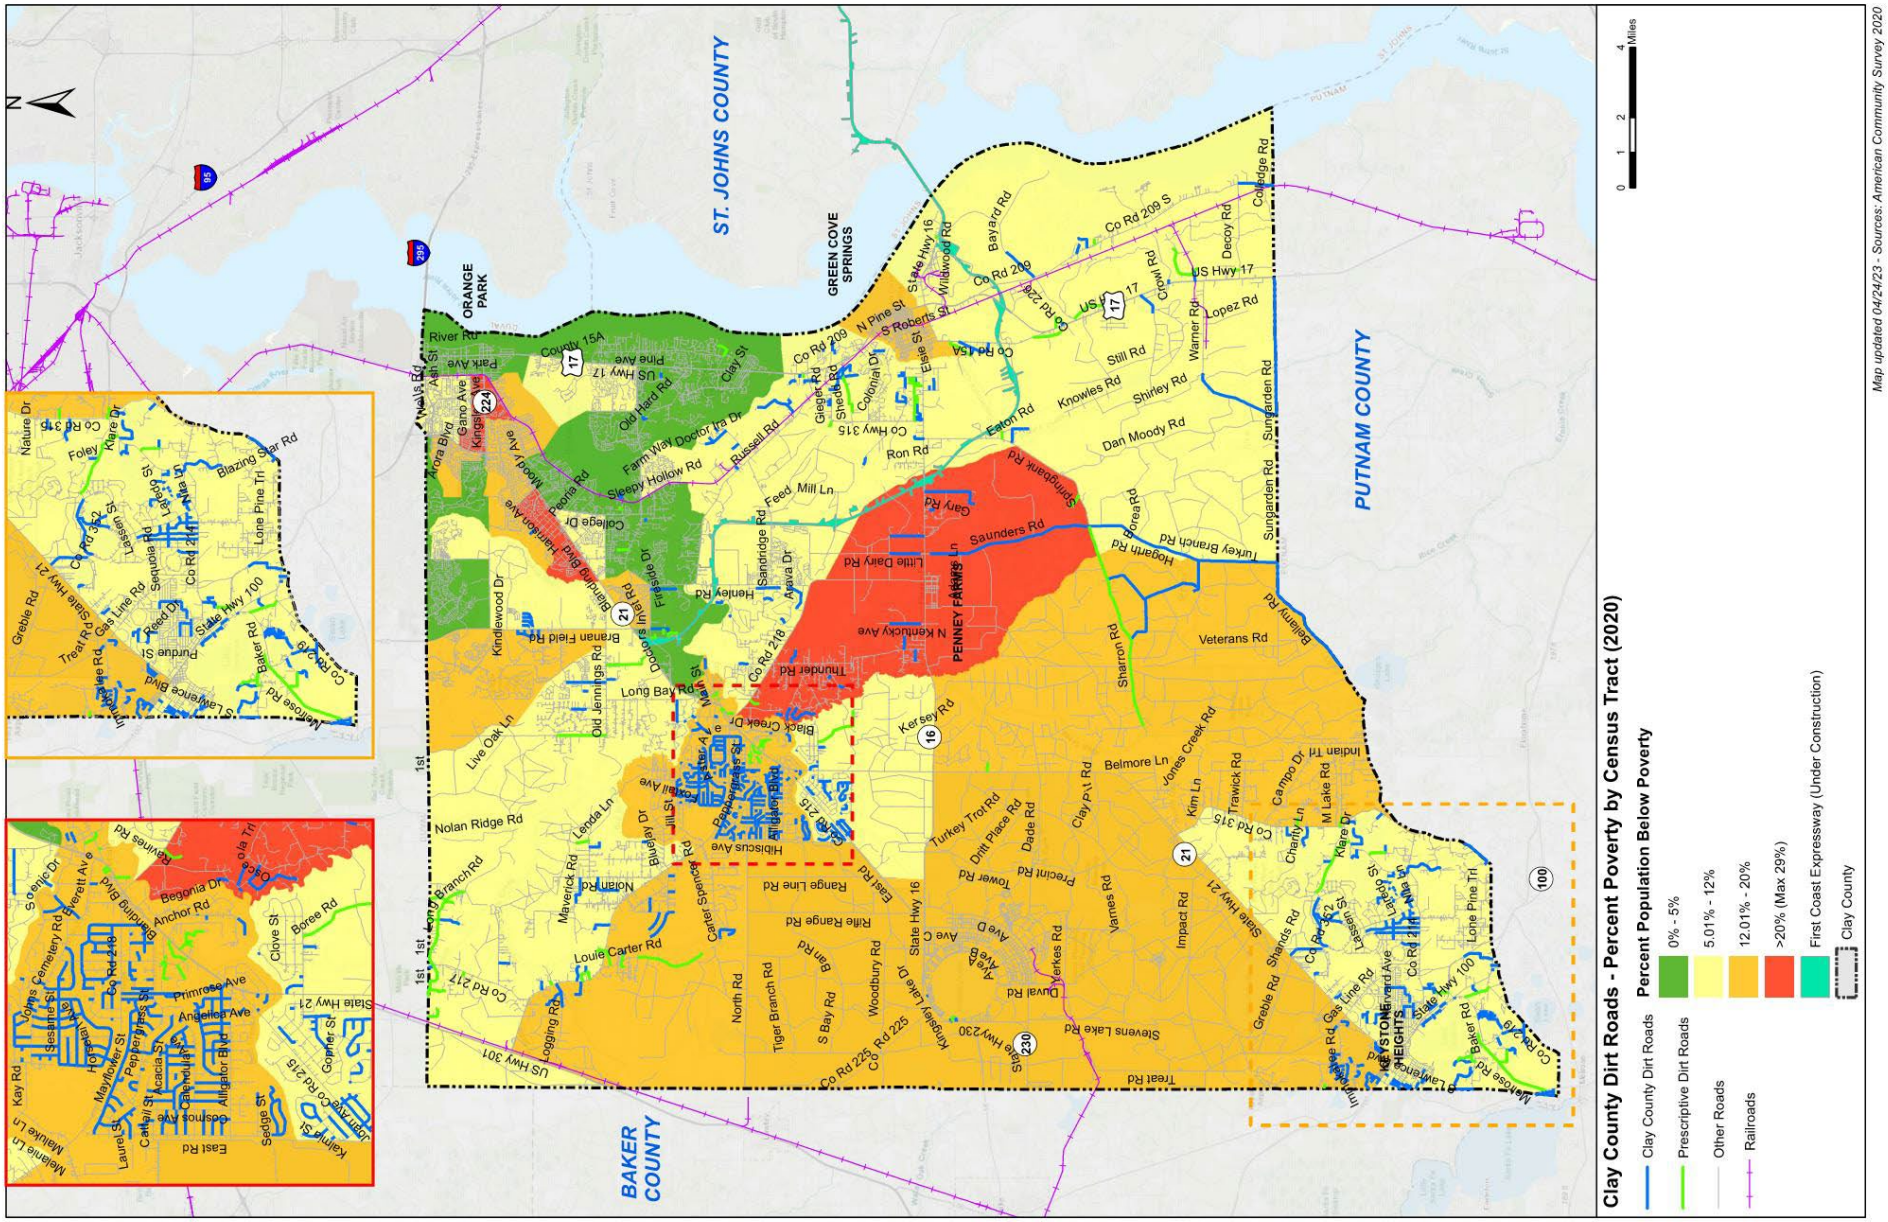

Figure 9 – Percent Poverty by Census Tract

2.2.6 Impact on Public Health and Safety

Public health and safety are also considered when prioritizing dirt roads. A road may receive a score of "1" for each of the following factors.

- Access to emergency evacuation routes
- Dirt road is within a census tract where the percent of persons living in poverty is greater than 12%

Dirt roads providing access to an evacuation route are shown in Figure 8. Figure 9 identifies the percent of the population in poverty by census tract. Overall, eight percent (8%) of persons in Clay County are living in poverty[1]. Scoring considers those dirt roads within census tracts where the number of persons in poverty is greater than 12% of the tract's population.

2.2.7 Average Annual Maintenance Costs

Clay County staff maintain dirt roads on a three-week schedule, with each road graded about 17 times per year. A maintenance cost per mile was developed by Clay County staff and is used to estimate the annual cost:

- Estimated Equipment Cost = $2,300 per mile
- Labor Cost = $1,800 per mile
- **Total Maintenance Cost = $4,100 per mile**

The annual maintenance costs for each dirt road segment are calculated and added together to receive a total for each road. The total cost is scored from 1 (under $10,000 per year) to 6 (>$100,000 per year). Longer roads have higher maintenance costs and include Hogarth Road, Saunders Road and Sungarden Road.

2.2.8 Final Prioritization Score

The score for the first six categories is totaled for each dirt road segment. The high segment score for each road is determined and then added to the road maintenance cost score for a total prioritization score. A summary of the dirt roads by prioritization score is provided in Appendix B. Roads scored from 1 to 14 points, with the highest scoring roads listed in Table 2. King Street, Spring Lake Road and Sungarden Road score the highest, at 14 points. Other high scoring roads are Gary Road (13) and Paso Fino Road, with 13 points each. As noted in the table, half of the high scoring segments require acquisition of prescriptive ROW prior to paving.

The complete evaluation matrix is provided under separate cover. By using a matrix, County staff can easily sort the database, change values for scoring criteria and update when roads are paved or ROW acquired.

[1] QuickFacts, Clay County, FL, US Census Bureau (2021)

Table 2 – High Prioritization Score Roads

Road	Score	Notes
King Street	14	Private ownership of 1 segment
Spring Lake Road	14	
Sungarden Road	14	
Gary Road	13	Insufficient ROW
Paso Fino Road	13	
Andromeda Lane	13	
Bayard Road	12	
County Road 209 S	12	
Knollwood Drive	12	Private ownership
Shedd Road	12	Some prescriptive segments, insufficient ROW
Sunrise Farms Road	12	Insufficient ROW
Warner Road	12	Insufficient ROW

3 NEXT STEPS

The data provided in the evaluation matrix is the first step in the evaluation and prioritization of dirt roads that are identified as candidates for paving. As can be seen in Table 2, high scoring roads may require additional efforts before paving can occur, such as acquisition of ROW. The evaluation allows County staff to review high scoring roads and identify where ROW should be considered for easements or purchase. Other screening criteria that should be considered for priority roads include:

- Cost: Detailed cost estimates that consider drainage impacts and bridges and/or culverts that would require replacing.
- Paving Difficulty: Existing dirt road is offset within the ROW and/or there are obstructions within the travel path such as trees.

Using this final level of screening will allow the County to prioritize maintenance on dirt roads scheduled for paving in the short term (< 5 years). Using County staff to prepare the road base and replace culverts in advance of paving may result in cost savings.

Prior to paving Sweet Moody Rd, the bridge over Greens Creek will need to be replaced.

1 STUDY OBJECTIVE

1.1 PROJECT DESCRIPTION

The North Florida Transportation Planning Organization (North Florida TPO, the TPO) is partnering with Clay County to conduct the Clay County Dirt Road Study. The purpose of this study is to analyze Clay County's public dirt road network and create a strategic plan to prioritize public and prescriptive dirt roads that are feasible to pave. The definition of a prescriptive road is a road easement right granted when one entity uses or accesses the property of another for a specific purpose, for a defined period, without consent.

A view of Allie Murray Rd in northern Clay County.

Figure 1 identifies the entire dirt road network in Clay County by maintaining organization. Benesch obtained this information in shapefile format from the Clay County Geographic Information Systems (GIS) Department on August 15, 2022. Clay County, Prescriptive, Municipal Service Benefit Unit (MSBU), Out of County, Private and State are six agencies or organizations responsible for the maintenance of dirt roads within the county's limits.

As a part of the Clay County Dirt Road Study, this technical memorandum summarizes the existing roadway characteristics and provides a crash data and safety assessment for Clay County's public and prescriptive dirt road network.

1.2 STUDY AREA DESCRIPTION

The Clay County public and prescriptive dirt road network is displayed in Figure 2. The current dirt road inventory consists of the following:

- Public roads: 172 miles
- Prescriptive roads: 44.44 miles
- Private roads: 250.26 miles

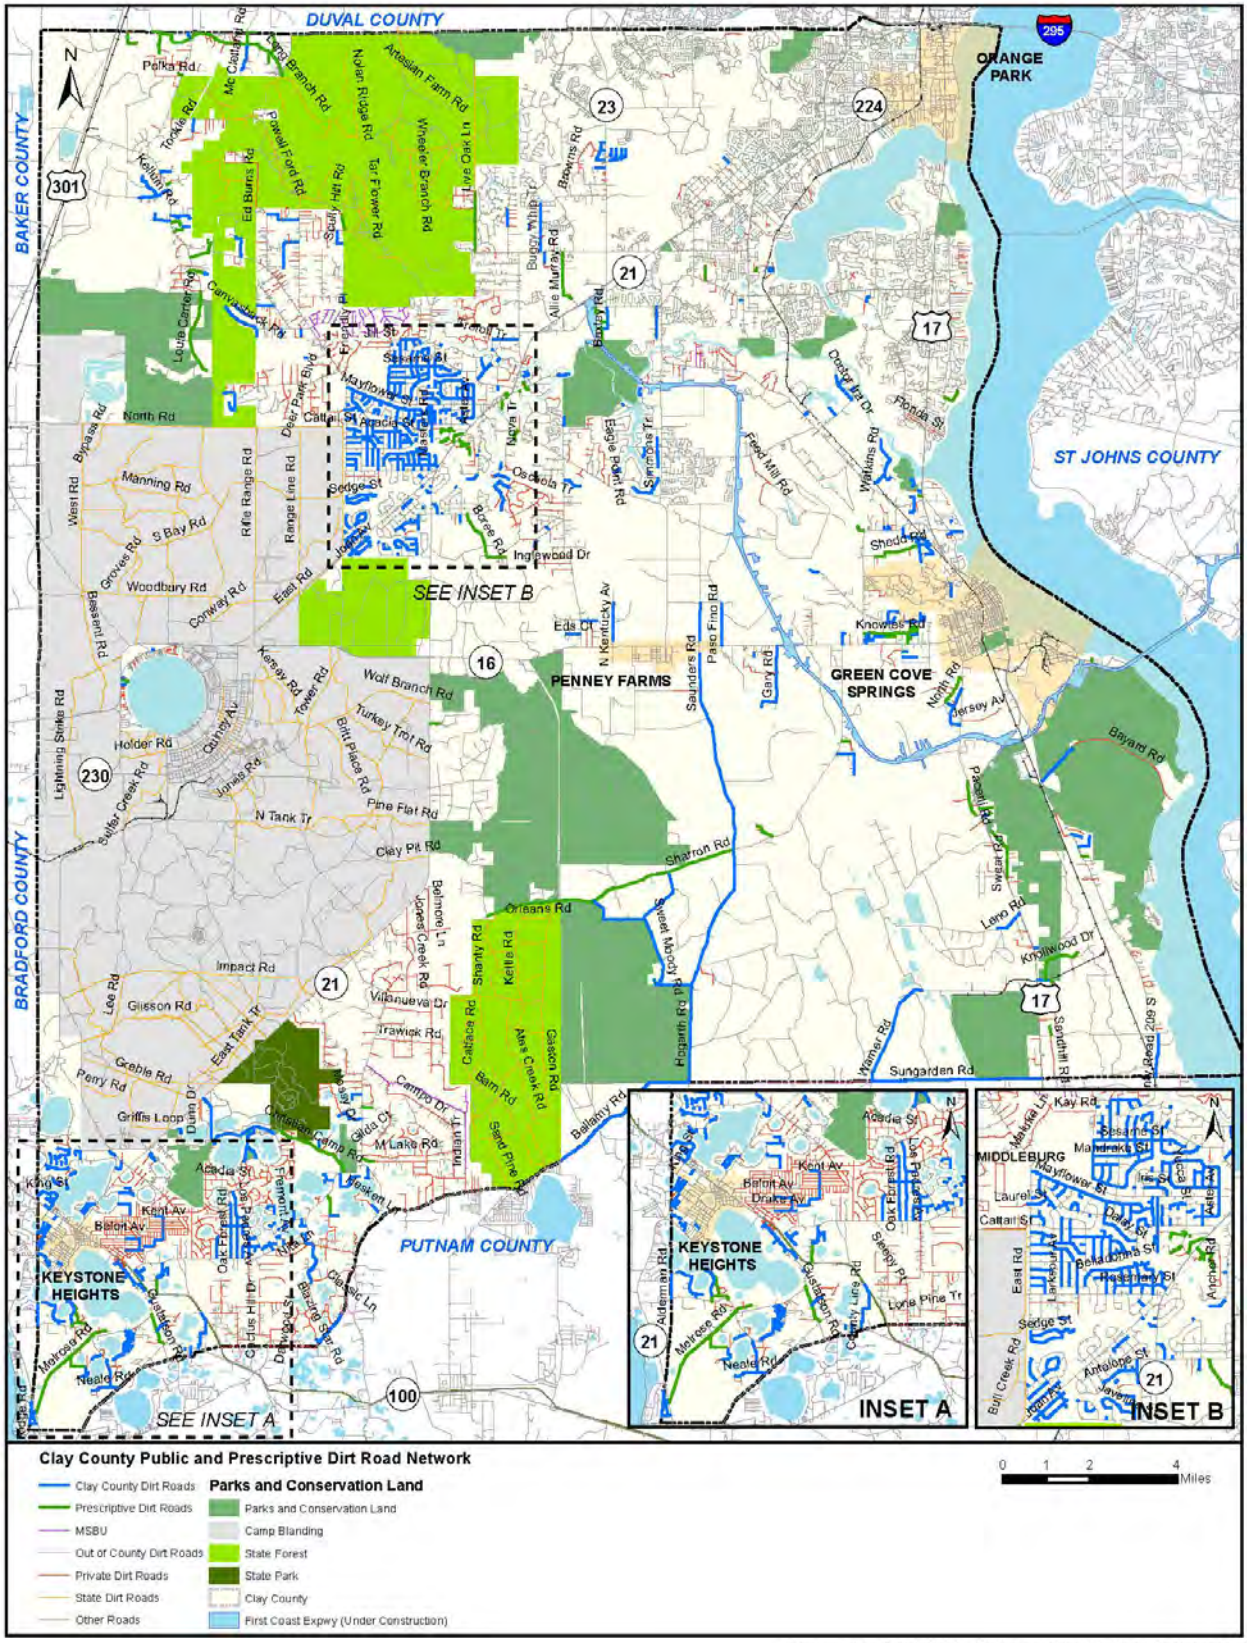

Over seventy percent (71%) of dirt roads to be evaluated for paving prioritization are in Commission District 4. Twenty-seven percent are within Commission District 5. The dirt road network by Commission District consists of the following:

- District 1 = 1.19 miles (4 Road Segments)
- District 2 = 4.03 miles (14 Road Segments)
- District 3 = 0.42 miles (3 Road Segments)
- District 4 = 143.81 miles (645 Road Segments)
- District 5 = 54.53 miles (140 Road Segments)

This technical report focuses on the development of a comprehensive inventory of the existing public and prescriptive road network for use in evaluating and ranking candidates for paving.

A view of Sweet Moody Rd, south of Penney Farms.

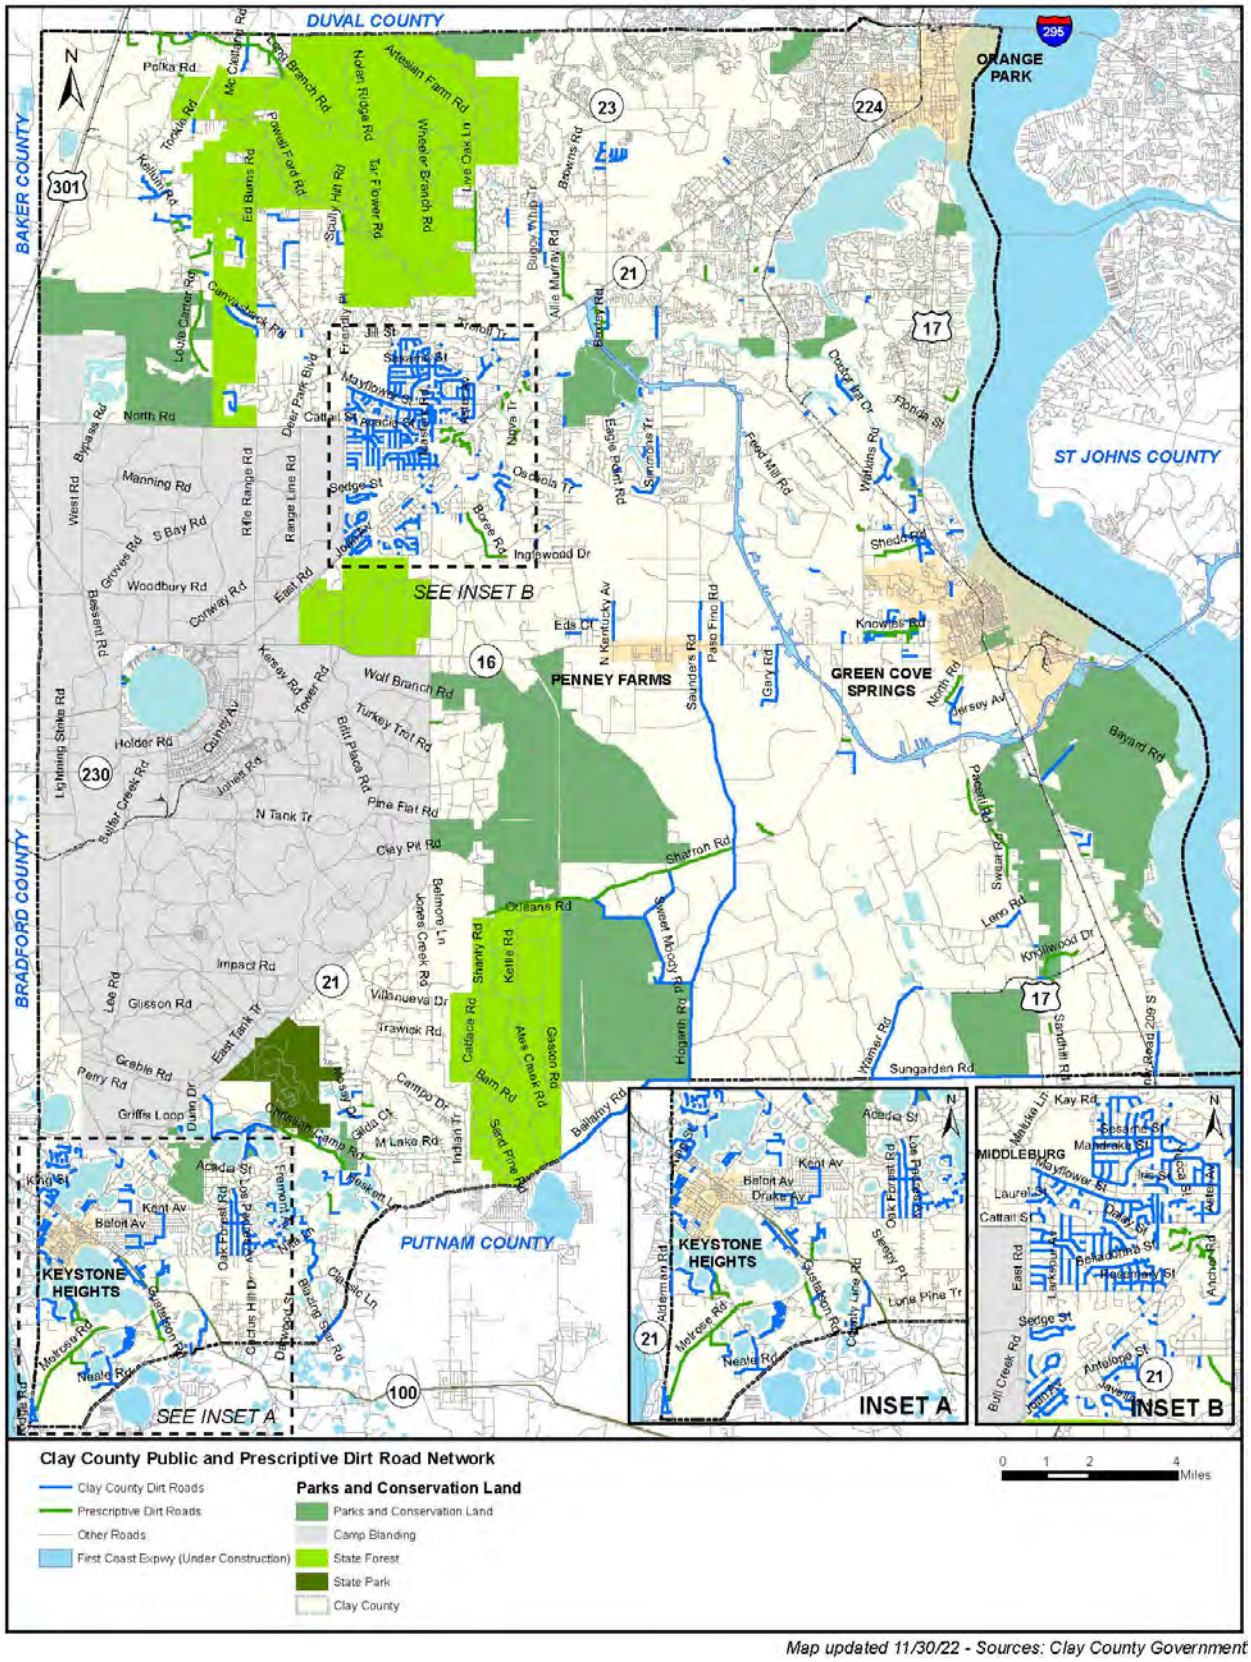

Figure 2 – Clay County Public and Prescriptive Dirt Road Network

2 ROADWAY NETWORK INVENTORY

2.1 EXISTING CONDITIONS

To conduct a thorough evaluation of the Clay County public and prescriptive dirt road network, Benesch analyzed the existing dirt road system and created an updated Roadway Characteristics Inventory (RCI) to physically locate and document the conditions of each roadway. The RCI is based on existing Clay County road network information obtained in shapefile format from the Clay County GIS Department on August 15, 2022. Benesch used the existing GIS-based roadway shapefile's attribute table data as a starting foundation to create the base RCI database.

The RCI indexes Clay County's public and prescriptive dirt road network by road segments, each with a unique Clay County Public Works Road ID. For each segment, we include information on roadway features, characteristics and other data elements and document the conditions of the dirt roads. Characteristics include road name, owner, maintaining agency and length (in miles).

The base RCI public and prescriptive dirt road database for study evaluation consists of 210.74 miles (849 road segments) of dirt road network:

- County Maintained Dirt Roads = 166.91 miles (720 road segments)
- Prescriptive Roads = 43.83 miles (129 road segments)

Benesch manually validated and updated the base RCI database to 2022 conditions. We did this through field review (conducted on October 10, 2022) and digital review of aerial files, Google Streetview, parcel and Right-of-Way (ROW) information obtained in GIS shapefile format from the Clay County Property Appraiser. Through this data collection and analysis effort, we documented, confirmed and added to the database additional inventory characteristics such as the identification of ROW width and location by roadway segment and commissioner district.

Furthermore, we identified 6.29 miles (39 road segments) as having already been paved and 0.37 miles (3 road segments) that have either been abandoned or no longer exist. We added a 2022 road surface condition column to the RCI database to document the public and prescriptive road segments that have been either paved or abandoned. As a result, this dirt road study will focus on the paving prioritization for the 203.98-mile (807 Road Segments) Clay County public and prescriptive dirt road network:

- Public roads: 160.48 miles (679 Road Segments)
- Prescriptive roads: 43.50 miles (128 Road Segments)

The current RCI database is provided in Appendix A. We continue to add quantitative and qualitative metrics during the dirt road evaluation and strategic plan development phases of the study.

2.2 DATA REVIEW

Benesch obtained additional information from the Clay County GIS Department, Florida Department of Transportation (FDOT), Florida Geographic Data Library, Clay County School District and other resources for

analysis and potential inclusion into the RCI database during various phases of the study effort. Table 1 highlights the data collected and to be used during each phase of the dirt road study.

Benesch conducted field verification of the public and prescriptive dirt road network on October 10, 2022 to validate obtained data and analysis efforts. We provided examples of photography collected during that review in Appendix B. We also include existing conditions maps in Appendix C. These are produced in support of on-going efforts to create the RCI database, quantitative and qualitative evaluation metrics, and strategic plan to prioritize dirt road candidates for paving.

3 SAFETY ASSESSMENT

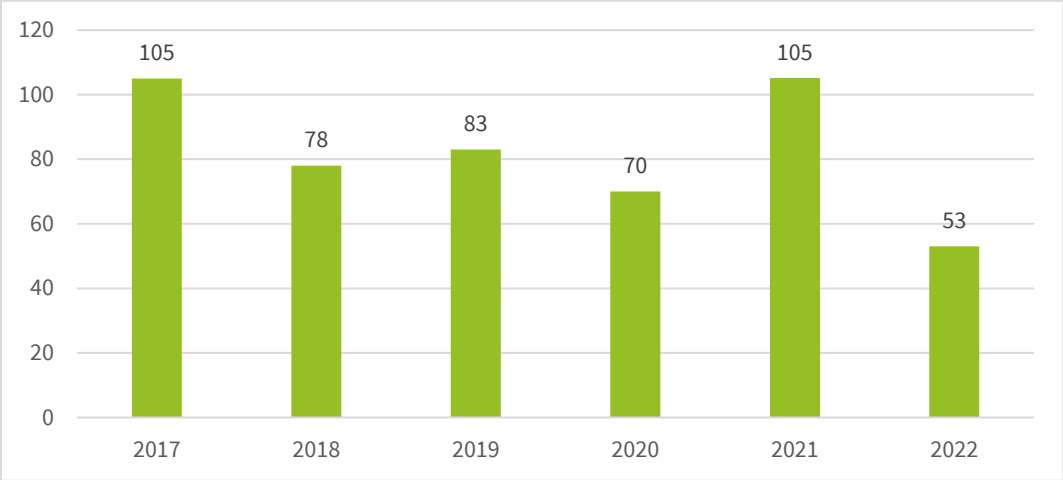

We obtained crash records for Clay County for a six-year period (2017 through October 8, 2022) from the University of Florida's Signal Four Analytics. Of the 31,328 crashes that occurred throughout Clay County during this period, 494 crashes occurred on the public and prescriptive dirt road network.

In this section, we summarize the dirt road crash statistics. We provide crash maps in Appendix D.

3.1 CRASHES BY YEAR

Table 2 depicts dirt road crashes by year for the time period from 2017 through October 8, 2022. The highest number of crashes occurred in 2017 and 2021.

Table 2 – Dirt Road Network Crashes by Year (2017 – Oct. 8, 2022)

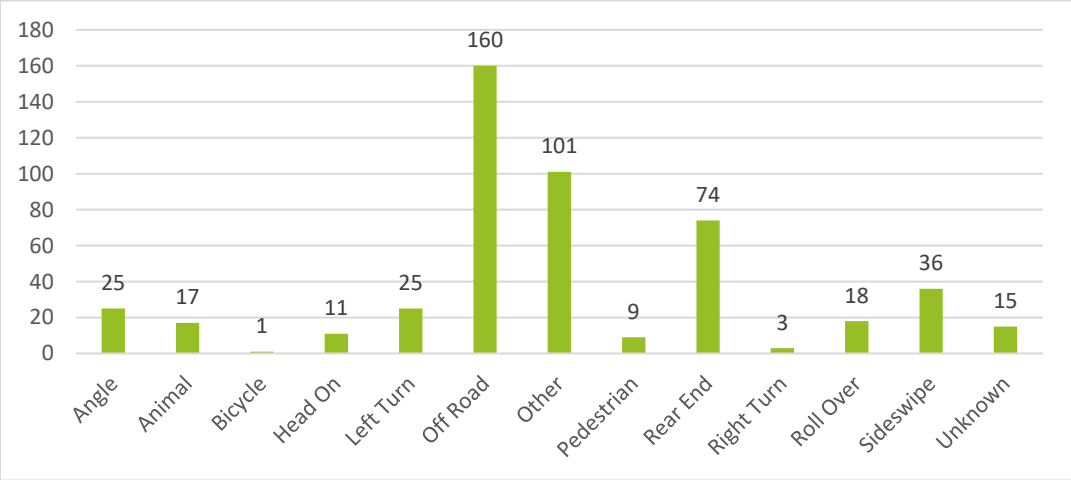

Most crashes occurred at intersections with paved roads. The dirt roads with the most crashes during the study period are listed below:

- Hogarth Road – 10 crashes
- Aster Avenue – 9 crashes
- Wells Road – 9 crashes
- Bundy Lake Road – 6 crashes
- Daisy Street – 6 crashes
- Yucca Street – 6 crashes

3.2 CRASH TYPE

Nearly one third of the crashes (160, 32%) were off road crashes and approximately 15% (101) of the crashes were sideswipes. Table 3 displays the crash type distribution.

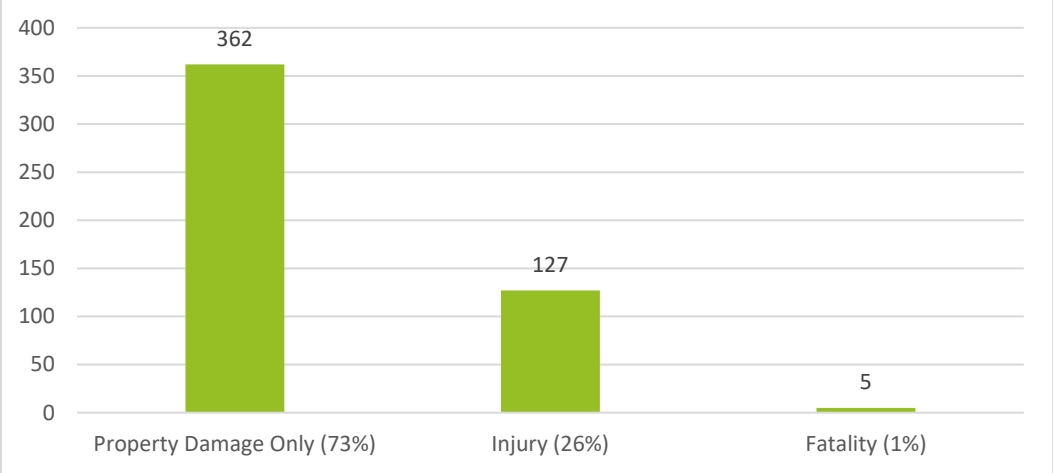

Table 3 – Dirt Road Network Crash Types (2017 – Oct. 8, 2022)

3.3 CRASH SEVERITY

Table 4 details crashes by severity. Of the 494 dirt road crashes within the study period, the majority (362, 73%) were property damage only collisions. There were 127 injury crashes of which 11 were incapacitating, 62 were non-incapacitating and 54 had possible injuries. Of the five fatal crashes, four occurred at a junction with a paved road and the dirt road was not a contributing factor to the crash. The fifth fatal crash involved a pedestrian and is discussed in Section 3.5.

Table 4 – Crash Severity (2017 – Oct. 8, 2022)

3.4 LIGHTING

A majority of the crashes (276, 56%) on public and prescriptive dirt roads occurred during the daylight. There were 198 nighttime crashes (40%). The remaining crashes occurred in unknown lighting conditions.

3.5 PEDESTRIAN AND BICYCLE CRASHES

There were nine pedestrian crashes and one bicycle crash over the study period. The pedestrian crashes were equally concentrated in the Middleburg and Keystone Heights areas of the county. One crash resulted in a pedestrian fatality at the intersection of County Road (C.R.) 214 and 5th Avenue near Keystone Heights. The bicycle crash occurred near the intersection of C.R. 209 S and Meadowbrook Farms Road, south of Green Cove Springs. There were no bicycle crashes that resulted in a fatality.

4 NEXT STEPS

Benesch will utilize the data provided in this document in the dirt road evaluation and Strategic Plan development to prioritize roadways that are feasible to pave.
