# 1. INTRODUCTION

This document outlines the St. Lucie Transportation Planning Organization's (TPO) Congestion Management Process (CMP). The CMP relies on data analysis of current transportation conditions to make informed decisions about congestion management strategies for the St. Lucie TPO planning area. The CMP is designed to support the key goals of the SmartMoves 2045 Long Range Transportation Plan (LRTP), focused on improving the regional transportation system.

The 2024 major update will be used to identify and prioritize projects for potential inclusion in the Florida Department of Transportation (FDOT) Five-Year Work Program, the TPO's List of Priority Projects (LOPP) and the TPO's Transportation Improvement Program (TIP). It is estimated that \$300,000 - \$400,000 of federal funds will be allocated to CMP projects each year.

## 1.1 Federal Highway Administration CMP Guidebook

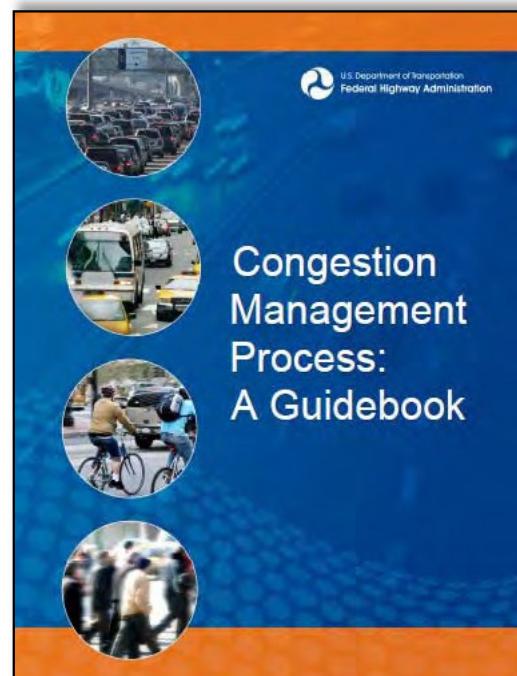

The FHWA's 'Congestion Management Process: A Guidebook' from April 2011, seen in **Figure 1.1**, was used as a reference guide for the development of the 2024 CMP Major Update. Other documents reviewed and used for the major update include the FHWA Highway Capacity Manual (HCM), the Traffic Monitoring Guide (TMG), the St. Lucie TPO's SmartMoves 2045 Long Range Transportation Plan (LRTP) and the current Transportation Improvement Program (TIP).

## 1.2 What is a CMP?

The CMP is a systematic and regionally accepted approach for managing congestion that provides accurate, up-to-date information on transportation system performance and assessed alternative strategies for congestion management that meet state and local needs. The CMP provides effective management and operation of the existing transportation system and is used to identify areas where improvements are most needed to best meet the vision of the TPO. The CMP analyzes data and provides tools to evaluate performance measures and make decisions regarding funding projects.

The CMP addresses the evolving needs, vision, and goals of the region. By using performance metrics, the CMP allows the TPO to assess current conditions of the area's transportation system and use performance measures to make decisions about congestion reducing projects. The CMP provides guidance that streamlines projects into funding and implementation stages. A flow chart of the CMP process is illustrated in Error! Reference source not found.2 on the next page.

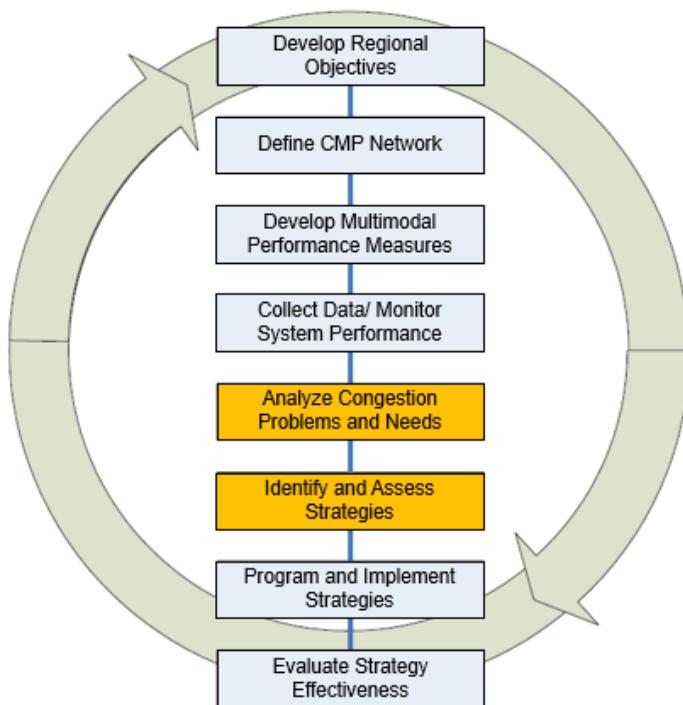

**Figure 1.1 CMP Guidebook**

This 2024 CMP major update is structured in two phases. Phase 1 is a system-wide evaluation of traffic count data and crash data across the region's transportation system. The analysis is used to identify roadway segments and intersections with significant congestion and safety concerns.

These performance measures will be used to prioritize projects for additional evaluation in Phase 2. Phase 2 of the CMP requires an in-depth analysis of the prioritized projects and is used to develop congestion mitigation strategies and safety enhancements within the regional network.

**Figure 1.2 CMP Flow Chart**

### 1.3 CMP Benefits

The CMP benefits regional transportation systems by addressing congestion concerns linked to growth, land use changes, changes in travel patterns, mode shifts, and infrastructure changes. The CMP process provides a framework for the TPO to respond to congestion and operational issues in an ever-changing environment. The Federal Highway Administration (FHWA) identifies the following benefits of a successful CMP:

- A structure to analyze congestion issues.
- Increased collaboration and coordination
- Effective resource allocation
- Providing objective-driven and performance-based approach
- Links to project development and environmental review
- Improved safety

The TPO will identify projects that will provide the most benefit to the multi-modal transportation network. The funds will be allocated to projects that reduce congestion, enhance safety, decrease travel time delays, support environmental initiatives by combating emissions from idling vehicles and reduce fuel costs for motorists.

## 1.4 Goals and Objectives

The Federal Highway Administration (FHWA) states the CMP is an objective-driven, performance-based tool used for congestion management. The goals and objectives provide a framework to guide transportation improvements through a continuous CMP process. Performance measures are established to measure progress towards the defined objectives that address the region's congestion needs. Table 1.1 depicts the relationship between the goals, objectives and performance measures that are supportive of the St. Lucie TPO SmartMoves 2045 Long Range Transportation Plan (LRTP). The highlighted goals and objectives in Table 1.1 taken directly from the LRTP are consistent with the TPO's CMP illustrating the consistency of the TPO's major planning products.

This CMP Major Update directly incorporates the following goals from SmartMoves 2045 emphasizing support for the LRTP **Goal 1: Support Economic Activities, Goal 2: Provide Travel Choices, and Goal 5 Improve Safety and Security**. With clear guidance and performance measures, CMP projects will directly enable the efficient movement of people and goods and optimize the management and operations of the transportation system, promote safe travel choices, and ensure the safety and security of the entire transportation network.

The CMP major update will identify, evaluate, and prioritize CMP projects using performance measures developed and maintained through existing, regularly updated data sources. The highest prioritized projects will be candidates for potential inclusion in the FDOT Work Program, the TPO's List of Priority Projects (LOPP), and the Transportation Improvement Program (TIP). The TPO allocates approximately \$300,000 to \$400,000 annually in CMP Box Funds for these projects.

Objectives of the CMP major update include collecting data to calculate and evaluate congestion performance measures, improving modal choice through improvements to bike/ pedestrian and public transportation networks, improving efficiency of existing transportation services through intelligent traffic systems (ITS), ensuring community participation is representative and prioritizing congestion projects.

**Table 1.1 SmartMoves 2045 Goals, Objectives, and Performance Measures**

SmartMoves 2045 St. Lucie TPO LRTP	
Goal 1: Support Economic Activities	
Objectives	Performance Measures
Enable the efficient movement of people and goods on the roadway network	<ul style="list-style-type: none"><li>Percent of person-miles traveled on the Interstate are reliable.</li><li>Percent of person-miles traveled on the non-Interstate NHS that are reliable.</li><li>The truck travel time reliability (TTTR) index that is the average of the maximum TTR calculated for each reporting segment on the Interstate</li></ul>

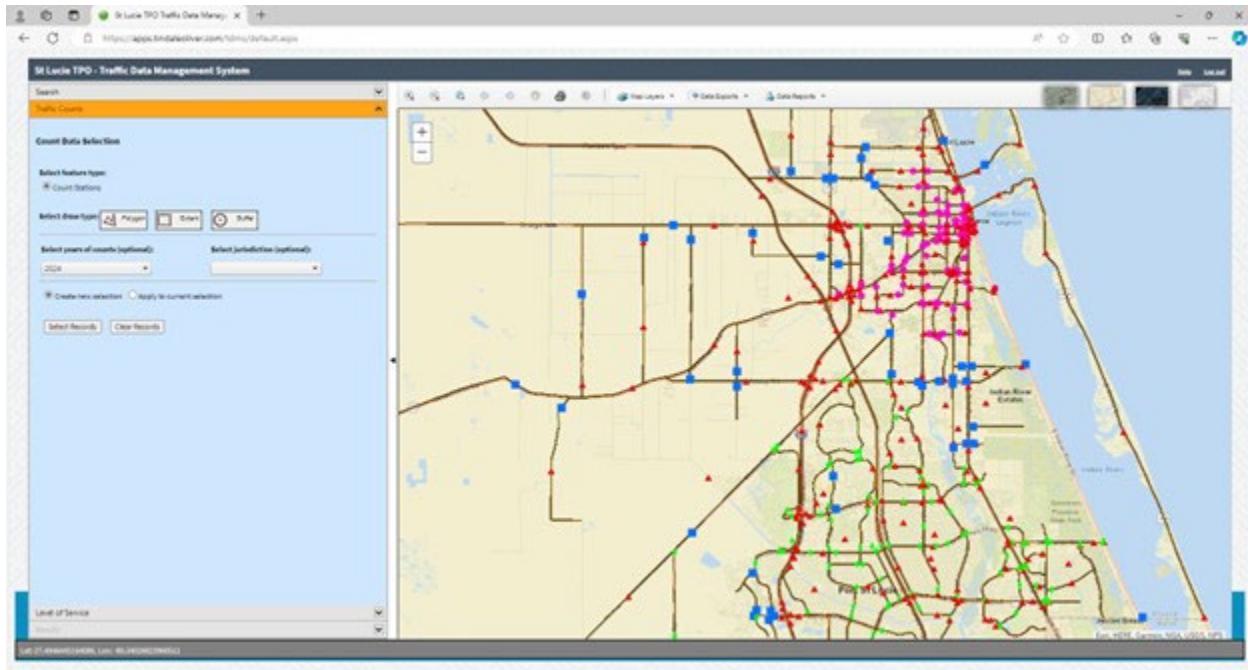

Optimize the management and operations of the transportation system	<ul style="list-style-type: none"> <li>TSM&amp;O Strategic Network Development</li> </ul>
Maximize the efficiency and effectiveness of the current transit system and improve access to destinations that support economic growth	<ul style="list-style-type: none"> <li>Percent of population within 1/4 mile of Major Activity Centers (MACs)</li> <li>Transit routes providing access to MACs</li> </ul>
<b>Goal 2: Provide Travel Choices</b>	
<b>Objectives</b>	<b>Performance Measures</b>
Encourage walking, cycling and other micromobility options	<ul style="list-style-type: none"> <li>Percent of roadways with sidewalks and bike lanes</li> </ul>
Improve transit accessibility	<ul style="list-style-type: none"> <li>Percent of transit stops with sidewalk access.</li> <li>Miles of fixed route transit service</li> </ul>
<b>Goal 3: Maintain the Transportation System</b>	
<b>Objectives</b>	<b>Performance Measures</b>
Maintain the condition of the existing roadway transportation assets	<ul style="list-style-type: none"> <li>Percent of pavements of the Interstate System in Good/Poor condition</li> <li>Percent of pavements of the non-interstate NHS is Good/Poor condition.</li> <li>Percent of NHS bridges classified as Good/Poor condition</li> </ul>
Maintain condition of existing transit assets	<ul style="list-style-type: none"> <li>Equipment- Percentage of non-revenue, support-service and maintenance vehicles that have met or exceeded their useful life benchmark.</li> <li>Rolling Stock- Percentage of revenue vehicles within a particular asset class that have either met or exceeded their useful life benchmark.</li> <li>Percent of facilities with a condition rating below 3.0 on the FTA Transit Economic Requirements Model (TERM) scale</li> </ul>
<b>Goal 4: Provide Equitable, Affordable, and Sustainable Urban Mobility</b>	
<b>Objectives</b>	<b>Performance Measures</b>
Support healthy living strategies, programs, and improvements to create more livable communities	<ul style="list-style-type: none"> <li>Walking modal share</li> <li>Bicycle modal share</li> <li>Transit modal share</li> </ul>
Ensure community participation is representative	<ul style="list-style-type: none"> <li>Opportunities for engagement in traditionally underserved areas</li> </ul>
Provide for transportation needs of transportation disadvantaged	<ul style="list-style-type: none"> <li>% of low-income, older adults, persons with disabilities within 1/4 mile of transit route</li> </ul>
Make transportation investments that minimize impacts to natural environment and allocate resources toward mitigation	<ul style="list-style-type: none"> <li>Number of additional roadway lane miles of impacting environmentally sensitive areas</li> </ul>
Improve transportation system's stability/resiliency in event of climate change emergencies, or disasters	
<b>Goal 5: Improve Safety and Security</b>	
<b>Objectives</b>	<b>Performance Measures</b>
Improve safety and security in the Highway System	<ul style="list-style-type: none"> <li>Number of fatalities</li> <li>Rate of fatalities per 100mil VMT</li> <li>Number of serious injuries</li> <li>Rate of serious injuries per 100 VMT</li> </ul>
Improve safety and security in the Transit System	<ul style="list-style-type: none"> <li>Total number of reportable fatalities</li> </ul>

	<ul style="list-style-type: none"> <li>• Rate of reportable fatalities per total vehicle revenue miles by mode</li> <li>• Total number of reportable injuries</li> <li>• Rate of reportable injuries per total vehicle revenue miles by mode</li> <li>• Total number of reportable safety events</li> <li>• Rate of reportable safety events per total VMT by mode</li> <li>• Mean distance between major mechanical failures by mode</li> </ul>
Improve safety and security in the Non-Motorized System	<ul style="list-style-type: none"> <li>• Number of non-motorized fatalities and serious injuries combined</li> </ul>

## 1.5 CMP Network

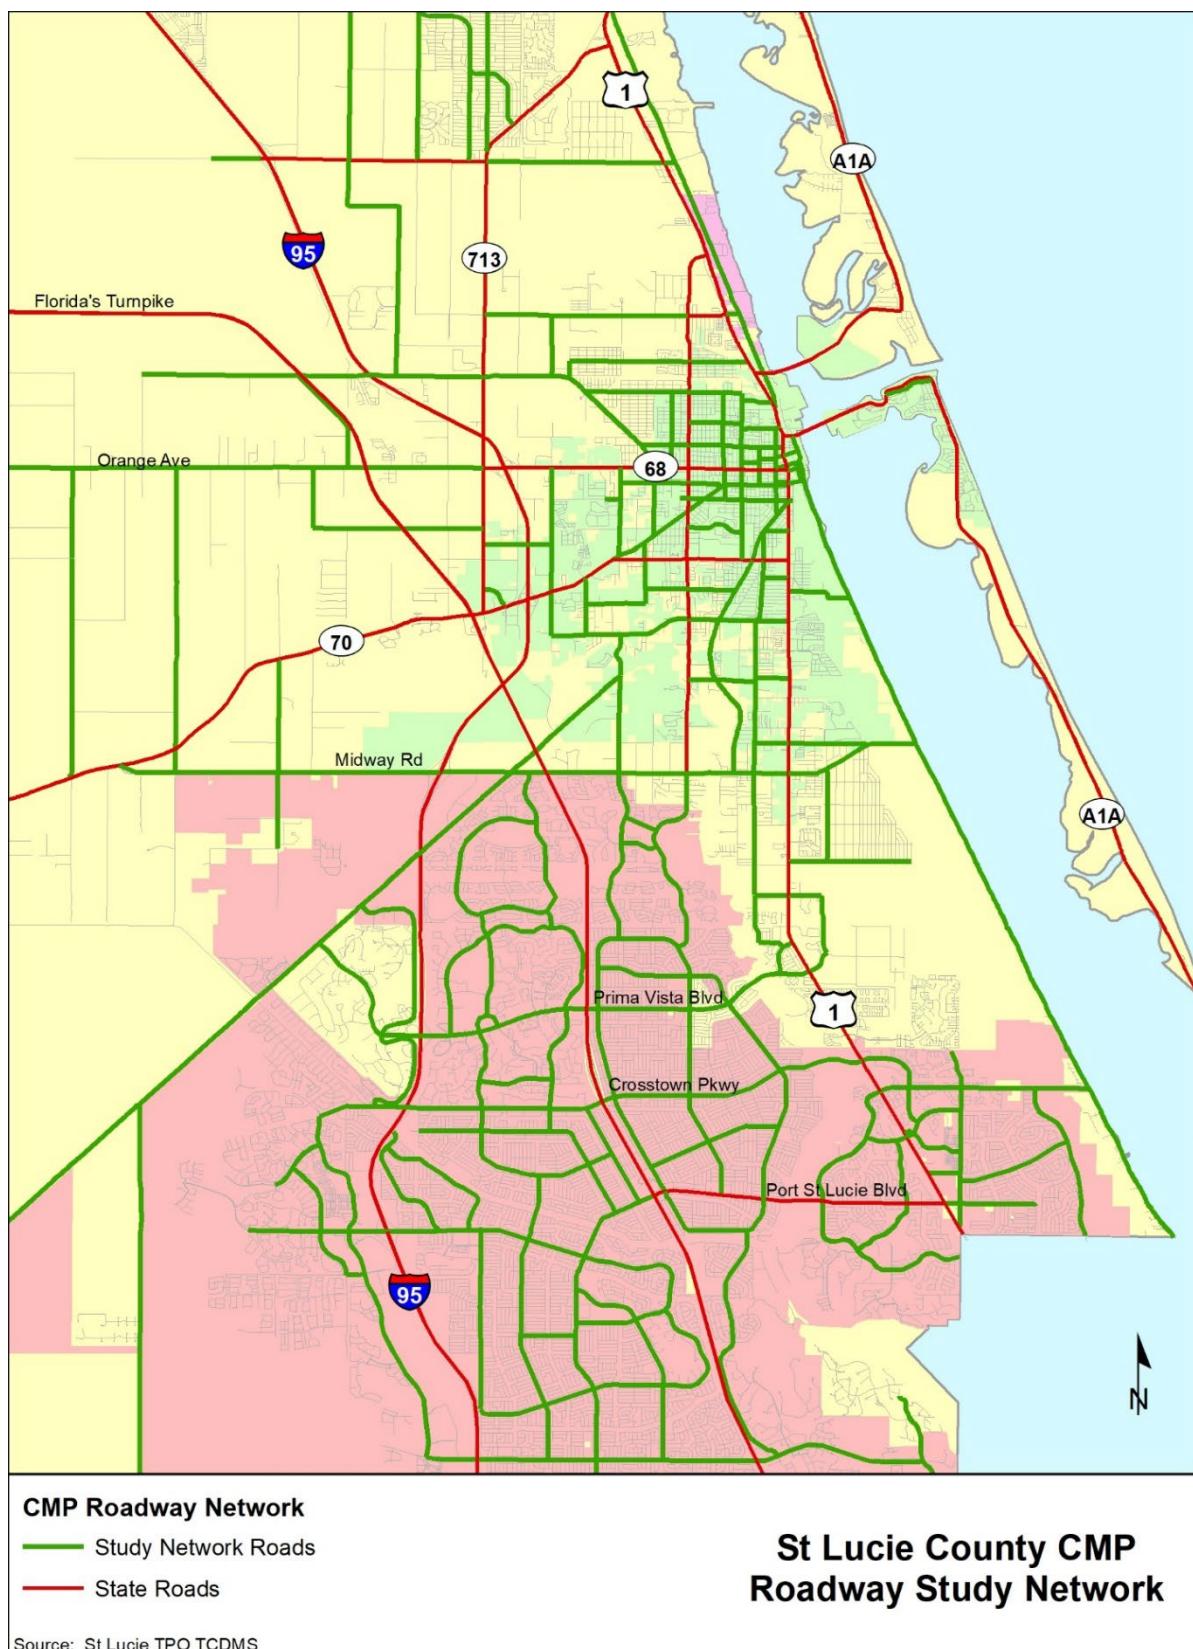

The CMP network is comprised of all major roadways in St. Lucie County that are included in the St. Lucie TPO's Traffic Data Management System (TDMS). The TDMS is available to the public, online via the St. Lucie TPO's website. This data management system collects annual daily counts from the State and TPO's annual collection programs and calculates peak hour traffic conditions data, which are used to develop performance measure values. This network is county-wide and includes the City of Fort Pierce, the City of Port St. Lucie, the Town of St. Lucie Village, and Unincorporated St. Lucie County. The web page of the St. Lucie TPO Traffic Data Management System website is shown in Figure 1.3.

**Figure 1.3 St. Lucie Traffic Data Management System Website**

For the purpose of this CMP update, the TDMS based study network was refined to include non-state road segments for which traffic data has been collected and installed in the TDMS. The study network is shown in Figure 1.4 on the next page.

**Figure 1.4 CMP Roadway Study Network**

## 2. PRIORITIZATION CRITERIA AND PERFORMANCE MEASURES

### 2.1 Performance Measures

The CMP focuses on providing specific, measurable, and agreed upon performance measures that can be tracked and analyzed by the TPO. Monitoring system performance can guarantee informed decisions are being made about the funding and implementation of congestion management strategies within the region. Per the Federal Highway Administration, a CMP must develop performance measures to support congestion management objectives and adequately assess system performance to clearly communicate problem areas. For the major update, performance measures are considered regional objectives, and utilize available data to identify needs and determine project prioritization.

The transportation network was evaluated in two phases. Phase 1 consisted of a system-wide evaluation of available traffic count and crash data to evaluate the CMP network on a larger scale. The performance measures were used to evaluate Phase 1 road segments to determine which roads move to Phase 2 for an in-depth analysis of roadway conditions. In Phase 2, the intersections and roadway segments were considered for congestion management project applications and strategies. The performance measures listed below outline the criteria for Phase 1 of the process.

The Phase 1 performance measures were:

- Volume to Capacity (V/C) Ratio screening
- Safety (fatality and serious injury crashes on the segment, including intersections)
- Key Stakeholder Input (local agency staff knowledge and concerns)

### 2.2 Phase 1 Prioritization Criteria

Three performance measures were used to evaluate and rank segments in the Phase 1 evaluation. These focused on evaluating the CMP network at a larger macroscopic level and included congestion, safety, and stakeholder input.

Congestion was measured using volume to capacity (V/C) ratios for the AM and PM peak periods. These ratios assisted in determining the level of service of a roadway or intersection. This measure allows for an understanding of the intensity and relative severity of the congestion that affects travel.

Crash data was analyzed for the years 2021 and 2022 using Signal 4 analytics to identify sever injury and fatal crashes. The goal was to identify the most dangerous network locations as the safety performance measure.

Lastly, key stakeholders identified roadway segments and intersections based upon their institutional knowledge. Points were awarded to these locations as the final performance measure for prioritization. The prioritization criteria and point system for each performance measure can be seen in Table 2.1 below. Crash segments and intersections identified by key stakeholder input were both given a maximum score of five points to highlight their specialized knowledge of the CMP roadway network.

**Table 2.1 Prioritization Criteria and Point System**

V/C Ratio	Rank Score	Crash	Score	Agency	Score
<= 0.80	1	Fatal or Severe Injury Crash	5	Stakeholder Concern Segment	5
0.80 – 0.94	2				
0.94 – 1.00	3				
1.00 – 1.10	4				
1.10 – 10	5				

## 3. PHASE 1 EVALUATION

### 3.1 Volume to Capacity (V/C) Screening

Step One of the V/C components of the Phase 1 evaluation included an initial screening of V/C ratios for study network segments for both the AM and PM Peak Periods. Step One identified 28 segments that had either an AM or PM V/C ratio of 1.00 or higher. Segments received the following scores, up to 5 points, for each peak-period, based on the V/C ratio ranges:

V/C Ratio	Rank Score
<0.80	1
0.80 - <0.95	2
0.95 - <1.00	3
1.00 - <1.10	4
>=1.10	5

Step Two was a review of the initial screening scoring for planned roadway improvements or changes to the TDMS segmentation that would impact scoring. Step Two identified six of the top ranked segments that could be re-scored due to planned roadway improvements or changes to TDMS segmentation. Four segments were identified as being scheduled for capacity improvements in the Transportation Improvement Plan (TIP), and two segments were identified as proposed candidates for segmentation changes in the TDMS that would lower the assigned V/C due to count station location. Table 3.1 on the next page, shows the top ranked segments after the initial V/C screening, with segments to be rescored identified. V/C ratio maps for the AM and PM peak periods and the full scoring tables are provided in the Appendix.

Step Three of the V/C component included a projection to 2028 using historical traffic count data in the TDMS with the planned TIP roadway capacity improvements accounted for in the V/C ratio calculation. The V/C ratio screening concluded with a rescore of the study network segments using the revised scores for the six adjusted segments. The 2028 projected traffic conditions scoring table is provided in the Appendix.

Note: Segments with green highlight show higher V/C ratios than actual due to segmentation limits of the roadways.

Note: Segments with grey highlights have projects in the TIP that will improve V/C and remove them from priority ranking.

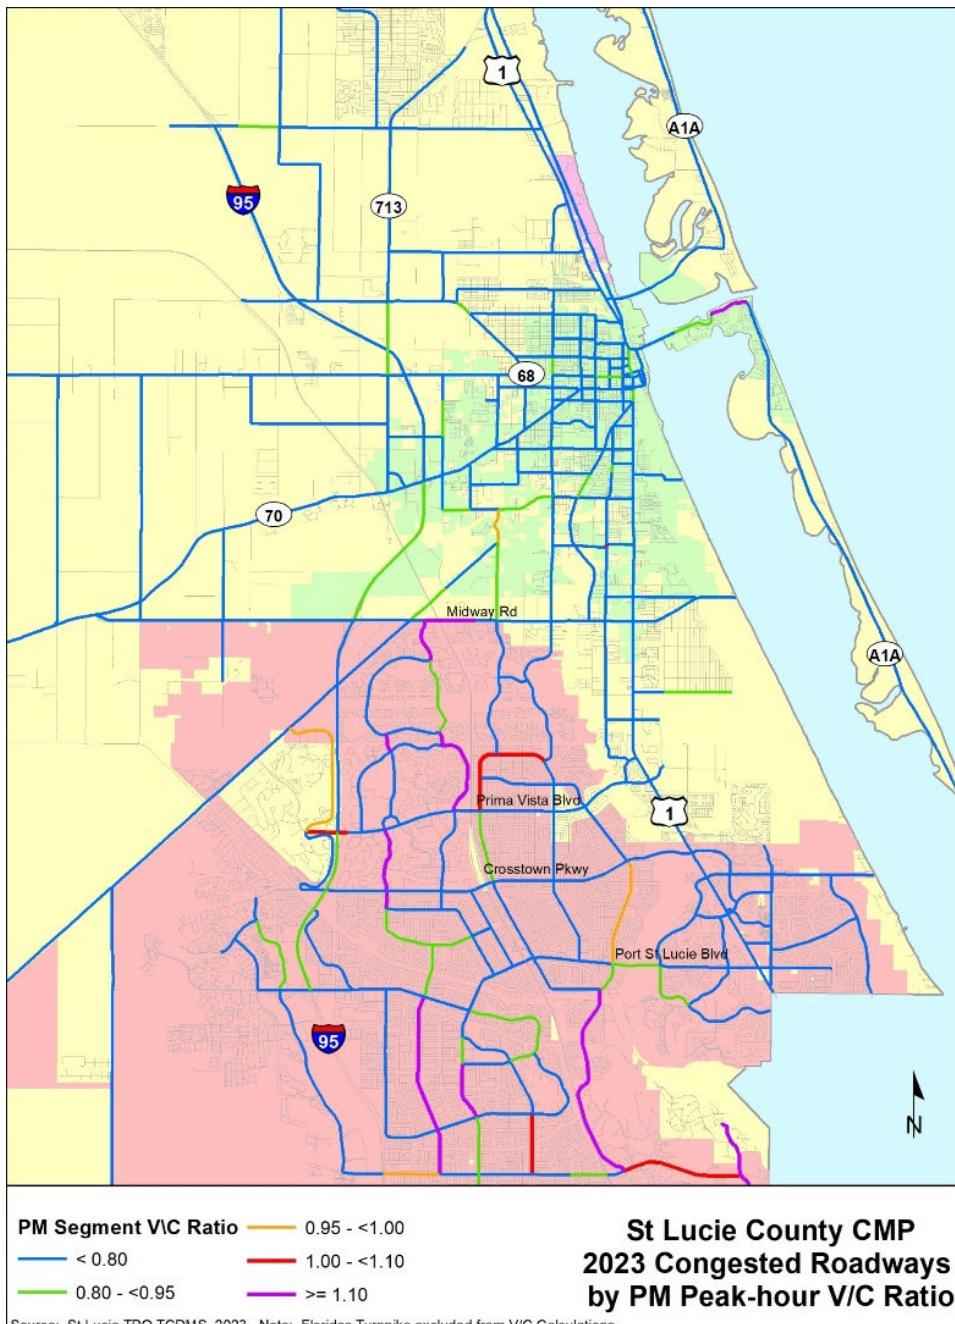

**Figure 3.1** on the following page visualizes congestion levels on various roadway segments in St. Lucie County during the AM peak hours. The V/C ratio is used to evaluate congestion, with different colors representing levels of congestion. The Traffic Data Management System does not provide V/C values for intersections so only segments were evaluated in the analysis. Additionally, the Florida Turnpike was excluded from the V/C calculations.

**Figure 3.1 AM Peak Hour V/C Ratios**

**Figure 3.2** visualizes congestion levels on various roadway segments in St. Lucie County during the PM peak hours. The V/C ratio is used to evaluate congestion, with different colors representing levels of congestion. The Traffic Data Management System does not provide V/C values for intersections so only segments were evaluated in the analysis.

**Figure 3.2 PM Peak Hour V/C Ratios**

## 3.2 Safety Screening

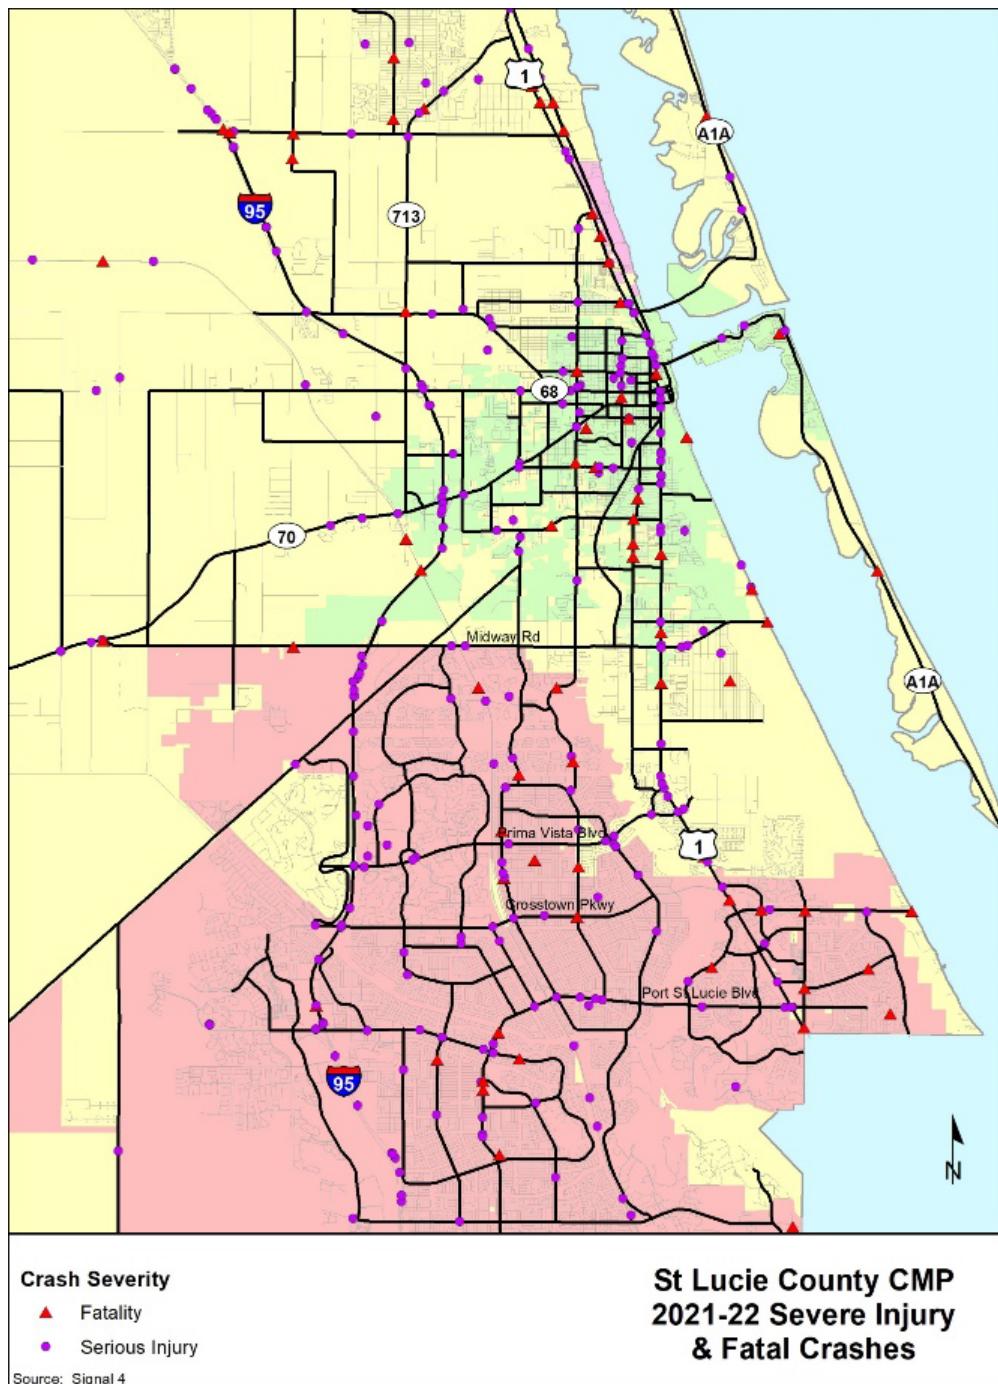

Signal Four crash data was collected for the two most recent full years of data available (2021, 2022). Initial screening of the crash data identified fatality and serious injury crashes on roadways within St Lucie County. This data was reviewed in GIS and further refined to identify fatality and serious injury crashes on study network segments. Figure 3.3 shows the crashes by type on the study network roads.

Study network segments were scored five points based on crash severity. The scoring table was reranked based on the new scoring as shown in Table 3.2 on page 19. The full V/C and Crash scoring table is included in Appendix C.

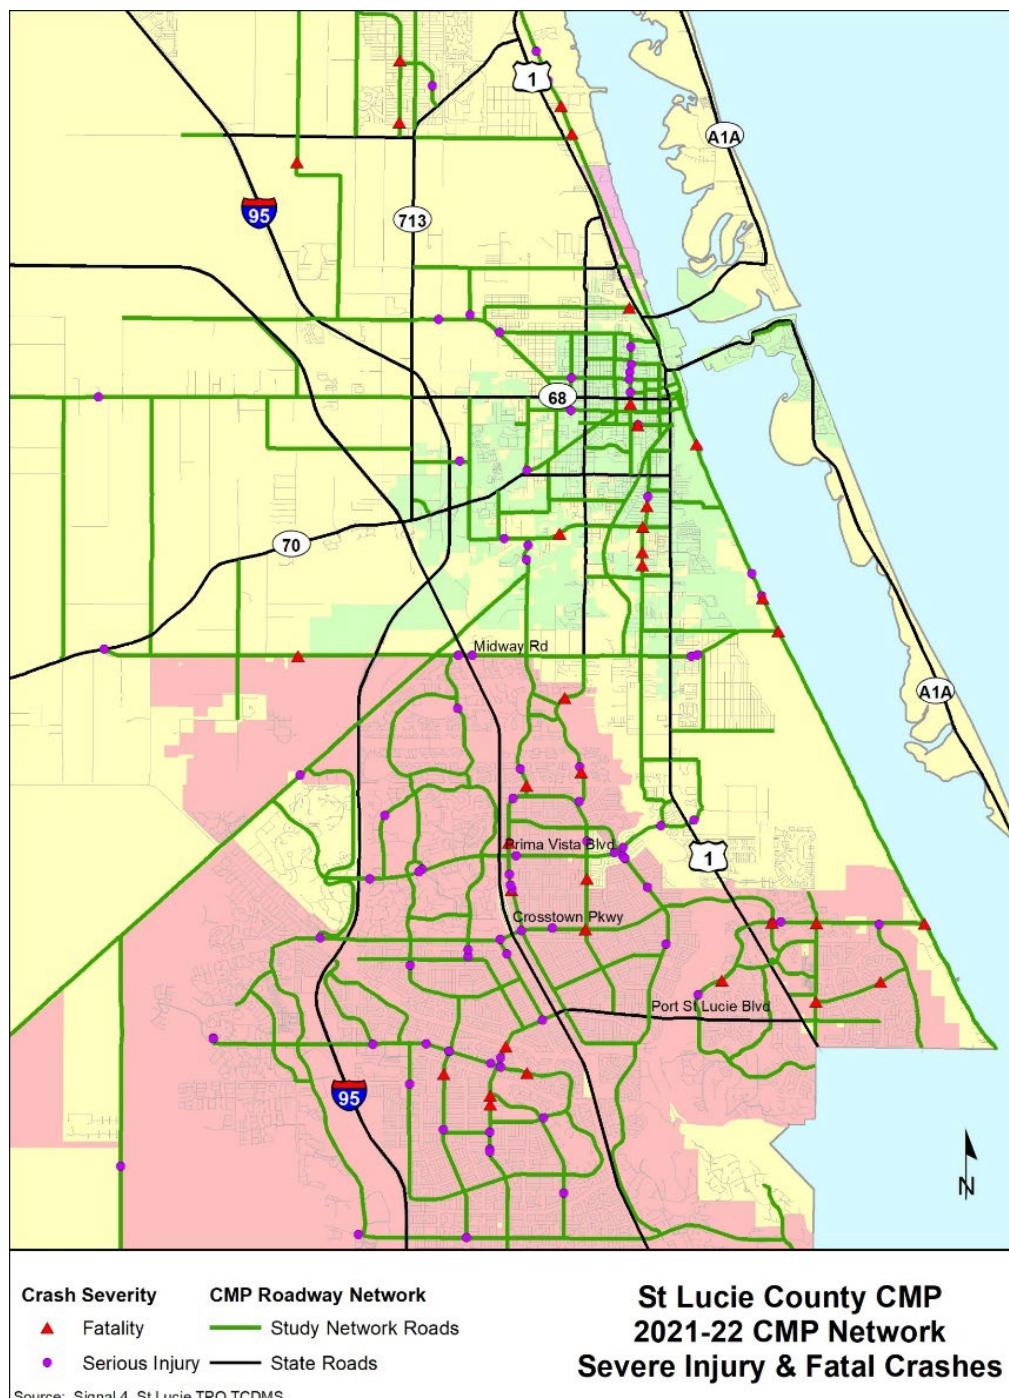

Crash	Score
Fatal or Severe Injury Crash	5

**Figure 3.3** on the next page visualizes the density and location of crash incidents throughout the County while **Figure 3.4** displays the location of high crash incidents overlayed with the CMP road network.

**Figure 3.3 Severe Injury and Fatal Crash Locations**

### 3.3 Key Stakeholder Input

The key stakeholders for the CMP Major Update were identified as members of the St. Lucie TPO's standing Technical Advisory Committee who represented the local jurisdictions. Most are traffic engineers with a strong grasp of the causes of traffic congestion and safety issues within their jurisdictions and the broader TPO area. The participating key stakeholders included representatives from the City of Fort Pierce, the City of Port St. Lucie, and St. Lucie County.

The key stakeholders were convened formally on two occasions during the development of the CMP in the form of Working Group Sessions. The first session was held on February 12, 2024, at the TPO office. Topics discussed included an overview of the CMP, the scope and goals of the update, the role of the key stakeholders, the CMP network, a review of the congestion and safety measures, and the initial ranking of congested corridors.

The second meeting of the key stakeholders occurred on April 22, 2024, in the form of a virtual meeting. During this meeting, a final list of prioritized congested corridors was presented and potential congestion mitigation and safety enhancements strategies at each of the highest ranked ten (10) locations was discussed. Copies of the PowerPoint presentation and other meeting materials are in Appendix F.

As mentioned previously, key stakeholders identified roadway segments and intersections based upon their institutional knowledge. Points were awarded to these locations as the final performance measure for prioritization. Congested and dangerous locations identified by key stakeholder input were given a maximum score of five points to highlight their specialized knowledge of the CMP roadway network. Segments identified by stakeholders were assigned five additional points for reranking and participants agreed to provide input within a period of time.

Discussion of identified segments and planned improvements occurred during the working session. During the screening process identifying many of the areas of concern, three additional segments were identified by stakeholders as areas of specific concern. One of these segments identified is on a state road and "off

Study Network” but was identified as having impact on adjacent local roads and upon full scoring, ranked as a priority segment. Table 3.3 shows the high ranked study network segments. The full Phase One scoring Table is included in Appendix D.

**Table 3.3 – 2023 Phase One CMP Scoring**

Segment ID	On Street	From Street	To Street	AM Segment V/C	PM Segment V/C	Max. PH V/C	AM Score	PM Score	AM/PM Combined Score	Crash Score	V/C & Crash Score	Stake Holder Score	Ph. 1 Total Score

\*Indicates a State Road added at Stakeholder request

During a final review to determine the higher priority segments for the Phase 1 CMP selection, some segments were combined where it made sense to do so, i.e., where more than one segment connected major crossroads and had similar characteristics and scoring. Table 3.4 on the following page indicates the high priority CMP roadway segments for the Phase 1 evaluation and selection.

**Table 3.4 – 2023 Phase One Top 30 CMP Scoring – Some Segments Combined**

### 3.4 Final Identification of Phase 2 Locations

Upon completing the identification of congested and dangerous network locations two assessments were made. The first was to determine if the location has a programmed improvement already in place that would remove it from consideration in this current analysis. The impact of the currently programmed improvement will be measured and evaluated in subsequent CMPs. The second step included a review of the list with TPO staff and the key stakeholders to determine if any of the remaining high-ranking locations should be removed from consideration for one reason or another. Examples of reasons for removing locations from consideration could be previous studies that determined major capacity improvement were warranted (a large project solution only) or physical constraints.

This final step in the process of identifying which locations were to move forward to Phase 2 for further evaluation and identification of congestion management mitigation strategies and projects is illustrated in Table 3.5 on the next page.

**Table 3.5 Prioritization Criteria and Point System**

Segment ID	On Street	From Street	To Street	No. Segments	AM/PM Combined Score	Crash Type	Crash Score	Ph. 1 Total Score	In 2018 CMP?

1940	BECKER RD	SOUTHBEND BLVD	GILSON RD	1	8			8	Y

Note: Blue highlighted segments indicate programmed improvements scheduled by City of Port St Lucie

Note: Yellow highlighted segments are selected for CMP

The list of segments advanced for evaluation of projects and mitigation measures are shown below. It is understood that funds are limited with only \$300,000 to \$400,000 available every year for CMP projects. Therefore, only the top 10 locations were considered for recommended projects at this time. Each location was considered for applicable types of remediation projects identified in the CMP Toolbox.

	ON STREET	FROM STREET	TO STREET
1	Oleander Ave	Bell Ave	Farmer's Market Rd
2	Oleander Ave	Wisteria Ave	Gardenia Ave
3	Port St Lucie Blvd	Florida's Turnpike	Bayshore Blvd
4	Selvitz Rd	Glades Cut-Off Rd	Edwards Rd

10	Becker Rd	Southbend Blvd	Gilson Rd

## 4. CMP TOOLBOX

FHWA's Congestion Management Process: A Guidebook identifies applicable CMP Toolbox measures to address congested and dangerous locations. Each of the toolbox measures was considered for the top locations identified and advanced for Phase 2.

<b>Applicable CMP Toolbox Measures</b>	
<b>Multimodal Improvements</b>	
Sidewalks	
Bikes	
Transit	
<b>TSM&amp;O</b>	
ITS	
ATMS	
<b>Demand Management</b>	
Flex Time	
Van Pools	
Park-n-Ride	
<b>Roadway Capacity Improvements</b>	
Add Lanes	
ROW Constrained	
Turn Lanes	

## 5. PHASE 2 EVALUATION

The highest priority locations without programmed improvements were advanced for further evaluation and screened for potential mitigation strategies from the CMP Toolbox. This section discusses each congested location in more detail and where applicable recommends congestion mitigation, operational, and safety projects.

Each of these locations was discussed with the Key Stakeholders during the second stakeholders' workshop to better understand causes of congestion and potential mitigation strategies. Some of the locations have been studied previously and some had projects completed in the recent past. In general, all the locations were well known to the Key Stakeholders and in keeping with CMP project funding levels, low-cost options were considered. In some instances, a readily identifiable mitigation project is not apparent and further study outside of the CMP is required.

### 5.1 Analysis and Recommended Improvements

#### 5.1.1 Oleander Avenue, from Bell Avenue to Farmers Market Road

This segment of Oleander Avenue is currently congested in both the AM and PM peak hours of traffic. The segment is a 35 mph, two-lane undivided facility. There are currently no raised curbs, sidewalks, or designated bicycle facilities along the segment, although there are pre-construction phases of the St Lucie Walk-Bike Network identified in the CIP. Issues affecting congestion along this short segment include cut-through traffic making the jog on Oleander between Bell Avenue and Farmers Market Road, connecting 25<sup>th</sup> Street to the west with US 1 to the east. This cut-through traffic increases traffic volume on the segment, while impacting through traffic due to the turning vehicles onto and from Oleander Avenue from both Bell Avenue and Farmers Market Road. There is also notable trucking activity on the east side of Oleander Avenue at the Freshco Packaging Company which has a site driveway on Oleander, offset from the intersection with Bell Avenue.

It is recommended that intersection improvements be considered for the intersections of Oleander Avenue at Bell Avenue and Oleander Avenue at Farmers Market Road. The addition of left and right turn lanes on Oleander Avenue will accommodate traffic entering and exiting from the cross streets without impeding the flow of through traffic on the mainline. Additionally, increasing the turn radii at these intersections will better accommodate the trucks that are turning at Bell Avenue and Farmers Market Road. Oleander, Bell, and Farmers Market are all listed on the St Lucie Walk-Bike Network as either partially funded or unfunded needs, so this should be taken into consideration when planning the intersection improvements.

**Figure 5.1 Oleander Avenue between Bell Avenue and Farmers Market Road**

#### 5.1.2 Oleander Boulevard, from Wisteria Avenue to Gardenia Avenue

This segment of Oleander Boulevard is currently congested in the AM peak-hour, and nearing congestion in the PM peak-hour of traffic. The segment is a 35 mph, two-lane undivided facility in a residential area. There are currently no raised curbs or designated bicycle facilities along this segment. A five-foot sidewalk exists along the west side of the street. Mid-segment, Maravilla Park exists providing several sports amenities

**Figure 5.2 Pedestrian and Bicycle Improvements**

to the neighborhood. However, there are no sidewalks or designated bike facilities adjacent to the park, providing direct access to the park. At the north end of this segment, Gardenia Avenue provides access to a signalized intersection at US 1.

Rosalyn Avenue runs along the south side of Maravilla Park, intersecting with Oleander Boulevard at an offset intersection with Barbados Avenue. In 2022, during the PM peak-hour of traffic, a severe injury crash occurred as a vehicle attempted a left-turn to enter the intersection. South of this intersection, at Azalea Avenue there was a fatal bicycle involved crash during the analysis period.

In order to better serve all modes of access to Maravilla Park and improve safety along the corridor, it is recommended that the following pedestrian and bicycle improvements be considered: Provide a multi-use path along the east side of the corridor, for providing direct access for pedestrians and cyclists to Maravilla Park and connecting to existing sidewalks along Wisteria, Rosalyn, Maple, and Gardenia Avenues. Provide well-marked crosswalks with flashing beacons on Oleander at Rosalyn Avenue, Antilles Avenue, and Azalea Avenue, with advance signage along Oleander to increase awareness and promote caution at these locations.

### 5.1.3 Port St Lucie Boulevard at Bayshore Boulevard

This intersection connects Port St Lucie Boulevard, which is a multi-lane divided state road, with Bayshore Boulevard, a City of Port St Lucie multi-lane divided roadway, and provides access to the Florida's Turnpike (Figure 6-3, below). The south leg of this intersection provides access to the Florida's Turnpike ramps and southern Bayshore Boulevard. While overall congestion along Port St Lucie Boulevard from the Turnpike to Bayshore Boulevard was not flagged during the Phase 1 congestion analysis, safety and stakeholder scoring has ranked this intersection in the priority list. Of primary concern is the eastbound to northbound left-turn lane, which tends to back up during peak periods, causing spill-back of left-turning traffic into the through-traffic lanes and failing to meet turning movement demand during each cycle of the traffic signal. Recent improvements to this intersection were made to address the westbound to southbound left-turn movement, and related issues with the following left-turn to access Bayshore Boulevard to the south. During the analysis period, several severe-injury crashes occurred at or near this intersection.

Increasing storage for the eastbound left turn, whether through extending the lane or adding a second left turn lane, may be problematic since the eastbound approach to this intersection is descending off the overpass bridge over the Turnpike, immediately to the west of the intersection. Additional right-of-way and structural requirements may be restrictive to adding an additional lane due to the overpass, and extending the left turn lane would require additional green time for the movement which could adversely impact the other intersection movements, including the recently improved westbound left-turn.

Operation of this intersection directly impacts roadways under the Florida Department of Transportation District operations, the Florida's Turnpike Enterprise, and the City of Port St Lucie. Complex considerations are at play to meet the demands of travelers and the needs of all stakeholders.

It is recommended that agency stakeholders meet to find a cooperative and collaborative solution to ongoing issues regarding the safe and efficient operation of this intersection, meeting the needs of all parties.

**Figure 5.3 Port St Lucie Blvd at Bayshore Blvd**

#### 5.1.4 Selvitz Road, from Glades Cut-off Road to Edwards Road

This segment of Selvitz Road is currently very near congestion in both the AM and PM peak hours of traffic. The segment is a 35 mph, two-lane undivided facility. There are currently no raised curbs, sidewalks, or designated bicycle facilities along the segment, and there have been several severe-injury crashes along the segment during the analysis period. However, during coordination with stakeholders during the second

**Figure 5.4 Glades Cut-off / Selvitz Road Realignment**

Stakeholder Working Group session, plans were presented for planned improvements and realignment of Glades Cut-off Road and Selvitz Road in the vicinity of the study area. Therefore, no mitigation strategies are proposed for this segment at this time.

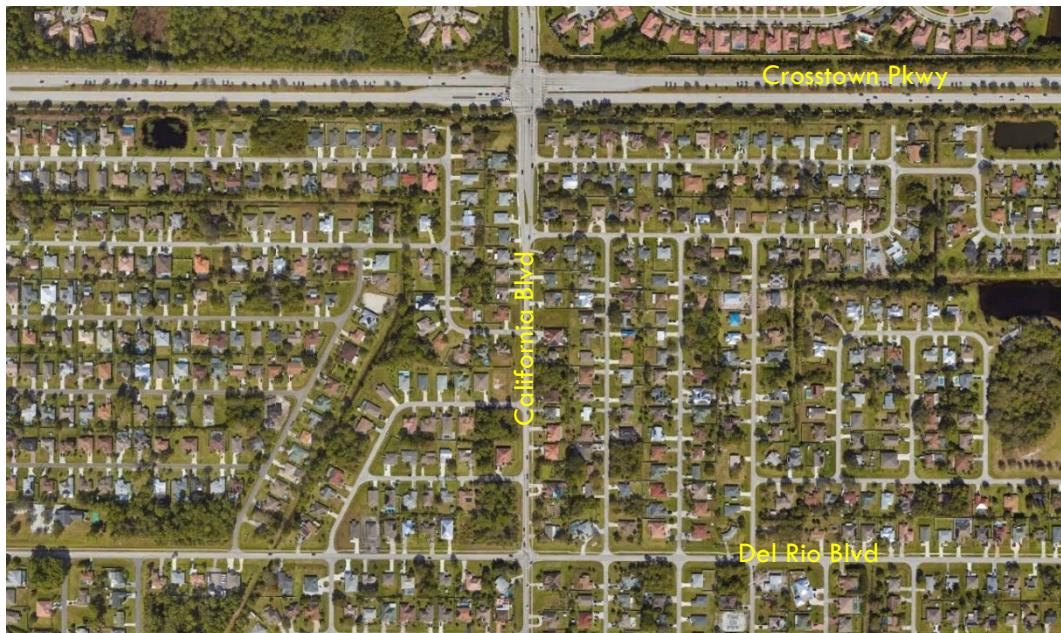

#### 5.1.5 California Boulevard, from Del Rio Boulevard to Crosstown Parkway

This segment of California Boulevard is currently congested in both the AM and PM peak hours of traffic. The segment is a 40 mph, two-lane undivided residential collector. There is a sidewalk along the east side, with a partial sidewalk along the northern part of the west side. Approximately 65% of the daily traffic on this roadway segment continues along California Boulevard to the south, with approximately 35% of the traffic travelling from/to Del Rio Boulevard at the south end of the segment.

This section of California Boulevard is listed in the current LRTP for widening to four lanes in the 2026 to 2030 period.

Due to the residential nature of the study area, it is recommended that additional consideration be given to bicycle and pedestrian safety, such as a multi-use path along the segment from Del Rio Boulevard to Crosstown parkway, with mid-block crossings and enhanced crosswalks at the Del Rio intersection.. As shown in Figure 5-5, below, California Boulevard and Del Rio Boulevard are both residential in character, as is the surrounding area.

**Figure 5.5 California Blvd, from Del Rio Blvd to Crosstown Pkwy**

### 5.1.6 Gilson Road, from Martin County Line to Becker Road

This segment of Gilson Road is a two-lane County Road that is currently congested in both the AM and PM peak hours of traffic. There are very few driveways or intersections along the roadway segment, and no pedestrian or designated bicycle facilities. Traffic analysis indicates that morning peak traffic is traveling southbound to Martin County, returning northbound in the PM peak-hour. The intersection of Gilson Road with Becker Road was recently improved with a roundabout, including crosswalks connecting to the sidewalks along Becker Road and a section of sidewalk along the Gilson Road between the crosswalks on the east

**Figure 5.6 Gilson Road, from Martin County Line to Becker Road**

side of the roundabout. South of the county line, the roadway continues as Murphy Road, a two-lane facility, in Martin County.

Recently, the Murphy Road bridge, south of the Martin County line was replaced as a two-lane facility. Murphy Road is in the 2045 Martin County MPO Long Range Transportation Plan as being widened from two to four lanes during the 2036 to 2045 period.

Gilson Road, from Martin County Line to Becker Road, is recommended for further study to address congestion issues. Additionally, coordination with Martin County is recommended in order that improvements, when scheduled, are planned to benefit the entire roadway and its users on both sides of the county line.

### 5.1.7 Bayshore Boulevard, from Crosstown Parkway to Prima Vista Boulevard

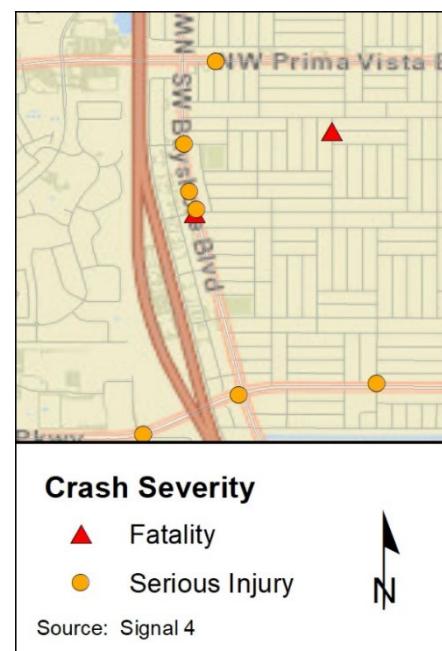

This segment of Bayshore Boulevard is a 40 mph, four-lane divided roadway that is currently approaching congestion in both the AM and PM peak-periods of traffic. There is a sidewalk along the west side of the segment and a multi-use path along the east side, providing access for pedestrians and cyclists. Bayshore Boulevard in this area serves as a collector road to a largely residential area and there are a large number of driveways along this segment.

During the analysis period, three severe-injury crashes and one fatal crash occurred along this segment. None of these crashes appear to have been influenced by peak-hour traffic conditions, and only one occurred at an intersection.

A traffic signal with full pedestrian phasing was recently installed at the intersection of Bayshore Boulevard and Lakehurst drive.

It is unknown if the new signal at Lakehurst Drive will have an impact on traffic metering as the only signal between the termini of this segment, and if such metering will mitigate severe vehicular crashes. Continued monitoring of traffic congestion and crashes is recommended. TSM&O / ATMS solutions include possible future real-time monitoring and adaptive traffic control to provide mid-segment traffic metering.

**Figure 5.7 Severe Injury & Fatal Crashes**

### 5.1.8 Bayshore Boulevard, from Selvitz Road to St James Drive

This segment of Bayshore Boulevard is currently congested in both the AM and PM peak hours of traffic. The segment is a 40 mph, two-lane undivided facility. There are currently no raised curbs, or designated bicycle facilities along the segment. A sidewalk runs along the south side of the street and there are crosswalks at the roundabout at Selvitz Road and at the signalized intersection with St James Drive. The area is residential and there are many residential driveways along the segment. Bayshore Boulevard becomes Airoso Boulevard west of the intersection at St James Drive. Continued monitoring of traffic congestion and crashes is recommended.

**Figure 5.8 Bayshore Blvd / Airoso Blvd, from Selvitz Rd to St James Dr**

#### 5.1.9 Edwards Road, from Selvitz Road to 25<sup>th</sup> Street

This segment of Edwards Road is currently approaching congestion in both the AM and PM peak periods of traffic. The segment is a 45 mph, two-lane undivided facility with five-foot paved shoulders. There are currently no raised curbs, or pedestrian facilities along the segment. During the analysis period, there was one fatal pedestrian crash along the segment during the AM peak hour of traffic.

At this time, it is not known what the impact of the major realignment of Glades Cut-off Road and Selvitz Road at the west end of this segment will have on traffic conditions of Edwards Road. Continued monitoring of traffic congestion and crashes along this segment is recommended.

**Figure 5.9 Edwards Rd, from Selvitz Rd (Future Glades) to 25<sup>th</sup> St**

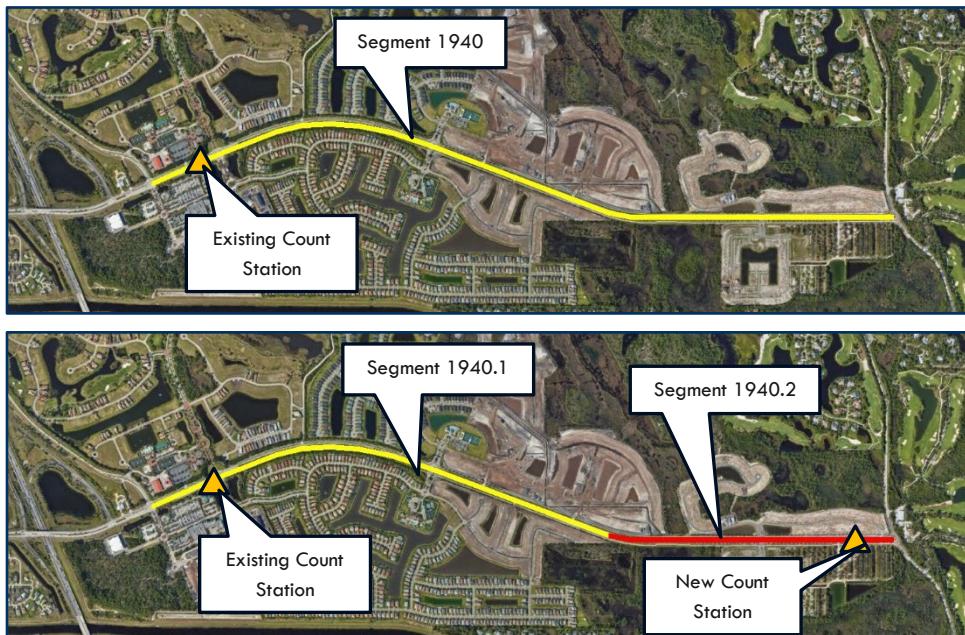

### 5.1.10 Becker Road, from Southbend Boulevard to Gilson Road

This segment of Becker Road includes sections of both four-lane and two-lane roads in an area of recent and ongoing development. The segment is currently congested in both AM and PM peak periods but is being analyzed as a two-lane facility and needs several updates for more accurate assessment and evaluation.

It is recommended that the analysis segment of Becker Road, from Southbend Boulevard to Gilson Road be split at the new point where the four-lane section becomes two-lane, east of Veranda Reserve Boulevard. Additionally, the eastern segment comprising the two-lane portion of Becker Road should be assigned a new traffic count station to be added to the St Lucie TPO annual traffic count program. Both new segments of Becker Road are recommended for further study to address remaining congestion issues under the proposed analysis recommendations.

**Figure 5.10 Becker Road Analysis Segmentation**

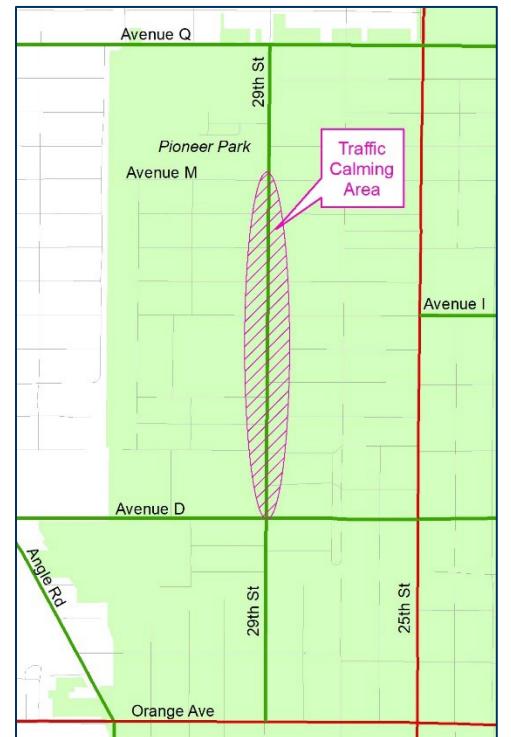

### 5.1.11 29<sup>th</sup> Street, from Orange Avenue to Avenue M

During the final stakeholder interaction, it was requested that 29<sup>th</sup> Street from Orange Avenue to Avenue M in Fort Pierce be added to the St Lucie TPO roadway analysis network for annual traffic monitoring, inclusion in the TPO Traffic Data Management System (TDMS), and consideration in the Congestion Management Process. Discussion was held regarding several traffic-related issues, including the absence of traffic counts, and speeding along this roadway. Two primary safety issues were brought forward regarding speeding along the corridor. First, 29<sup>th</sup> Street is primarily residential in this area, with a 25 mph posted speed limit and Chester A Moore Elementary School at the mid-point of the road segment. Excessive speeds have been noted in the vicinity of this school. Second there is a recurring issue with people congregating in the evenings at Pioneer Park, at Avenue M, and racing cars along 29<sup>th</sup> Street during the evenings.

A recommendation was made to include the segment in the TDMS and TPO roadway analysis network for traffic count monitoring. An additional recommendation was made for traffic calming strategies along the segment to reduce both daytime and evening speeding, particularly in the vicinity of Pioneer Park on Avenue M and Chester A Moore Elementary School. Traffic calming circles and speed tables at intersections, as well as speed humps mid-block along the corridor, should help to keep daytime speeds down and discourage racing in the evenings, with flashing beacon crosswalks in the vicinity of the school and the park to further increase safety in the area.

**Figure 5.11 29<sup>th</sup> Street  
Traffic Calming**

## 6. CONCLUSIONS & IMPLEMENTATION

The previously referenced *Congestion Management Process: A Guidebook* published by FHWA in 2011 defines congestion management as follows:

“Congestion management is the application of strategies to improve transportation system performance and reliability by reducing the adverse impacts of congestion on the movement of people and goods. A congestion management process (CMP) is a systematic and regionally accepted approach for managing congestion that provides accurate, up-to-date information on transportation systems performance and assesses alternative strategies for congestion management that meet state and local needs. The CMP is intended to move these congestion management strategies into the funding and implementation stages.”

This 2024 CMP Major Update by the St. Lucie TPO accomplishes all these objectives. Primarily, the TPO is dedicated to updating and maintaining on a regular basis data that is used to assess congestion consistently and on a regular basis. This allows for an accurate system and corridor-level evaluation of congestion within the TPO area. This CMP quantifies and ranks congestion on roadway segments which allows for the limited funding resources to be applied to locations where they will have the greatest impact. In application of the funds, this CMP considers all proven congestion mitigation approaches and safety enhancement that will be effective in serving the community.

This CMP goes to a deeper analytical level than most CMPS by analyzing and recommending specific project improvements. The process also engages local implementing agencies from the onset to ensure that everyone fully understands the value of the CMP and what can be accomplished through cooperation. The result is congestion management strategies that are ready to move into the funding and implementation stages.

Implementation of CMP strategies is a critical process and includes the following steps:

- Step 1 – Determine funding sources.
- Step 2 – Prioritizing strategies
- Step 3 – Programming projects in the Transportation Improvement Program (TIP)

The funding source that amounts annually to approximately \$300,000 per year will be available for the St. Lucie TPO for the implementation of CMP strategies (CMP box funds). Several ranked roadway segments and intersections are, or will be, subject to or influenced by ongoing or planned improvements. These segments have been recommended for continued monitoring to assess the impact of said improvements. The prioritization of identified CMP strategic projects is detailed in Section 5 of this report. Prior to programming projects in the TIP, estimated construction costs based on current generalized construction costs will need to be updated. The CMP Implementation Plan is provided below in the List of Priority Projects in Table 6-1.

**Table 6.1 2024 St Lucie TPO CMP List of Priority Projects**

Project #	Project Segment	Improvement Description	Estimated Cost	1	2	3	4	5	6
1	Oleander Ave from Bell Ave to Farmers Market Rd	Southbound left-turn lane and northbound right-turn lane at Farmers Market Rd. Increase turning radii.	\$300,000	\$300,000					
2	29th Street from Orange Avenue to Avenue Q	Install two to three speed humps/tables between Avenue D and Avenue Q for traffic calming.	\$300,000		\$300,000				
3	Oleander Blvd from Wisteria Ave to Gardenia Ave	Multi-use path along east side of ROW from Azalea Ave to Antilles/Windsor Ave. Flashing beacon crosswalk, sidewalk-path connections at Roselyn Ave, Antilles Ave, and Azalea Ave.	\$350,000			\$350,000			
4	Oleander Ave from Bell Ave to Farmers Market Rd	Southbound right-turn lane and northbound left-turn lane at Bell Ave. Increase intersection turning radii.	\$330,000				\$330,000		
5	California Blvd from Del Rio Blvd to Crosstown Pkwy	Multi-use path along segment from Del Rio Blvd to Crosstown Pkwy. Mid-block flashing beacon crosswalks. Enhanced crosswalks at Del Rio intersection..	\$300,000					\$350,000	
6	Bayshore Blvd from Crosstown Pkwy to Prima Vista Blvd	TSM&O / ATMS real time monitoring and adaptive traffic control for mid-segment traffic metering.	\$300,000						\$300,000
Estimated available revenue (from CMP box funds)				\$300,000 - \$400,000					
Revenue used for improvements				\$300,000	\$300,000	\$350,000	\$330,000	\$350,000	\$300,000

The St. Lucie TPO's CMP has been utilized to allocate the TPO's CMP box funds of \$300,000- \$400,000 annually towards CMP projects.

CMP project costs above have been estimated at the lower end of the funding range to allow for contingencies and inflationary effect.

## APPENDICES

## **APPENDIX A**

### **Initial 2023 AM and PM Congested Roadway Ranking**

Source: St Lucie TPO Traffic Data Management System, January 2024

Note: Segments with green highlight show higher V/C ratios than actual due to segmentation limits of the roadways.

Note: Segments with blue highlights have projects in the TIP that will improve V/C and remove them from priority ranking.

## Working Group Agenda

Congestion Management  
Process (CMP) Overview

Scope and Goals

Role of the  
Working Group

CMP Network

Next Steps

2

## Congestion Management Process (CMP) Overview

**What is the Congestion Management Process?**

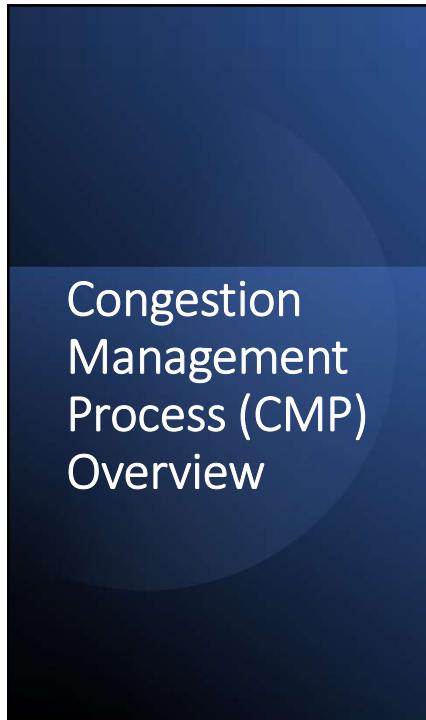

The Congestion Management Process (CMP) is a federally mandated process to help larger urban areas analyze and manage traffic congestion.

**What is the purpose of the CMP?**

The purpose of the CMP is to provide for effective management and operation of the existing transportation system and identify areas where improvements are most needed.

2024 CMP Major Update

3

## Congestion Management Process (CMP) Overview

**What are the CMP Requirements?**

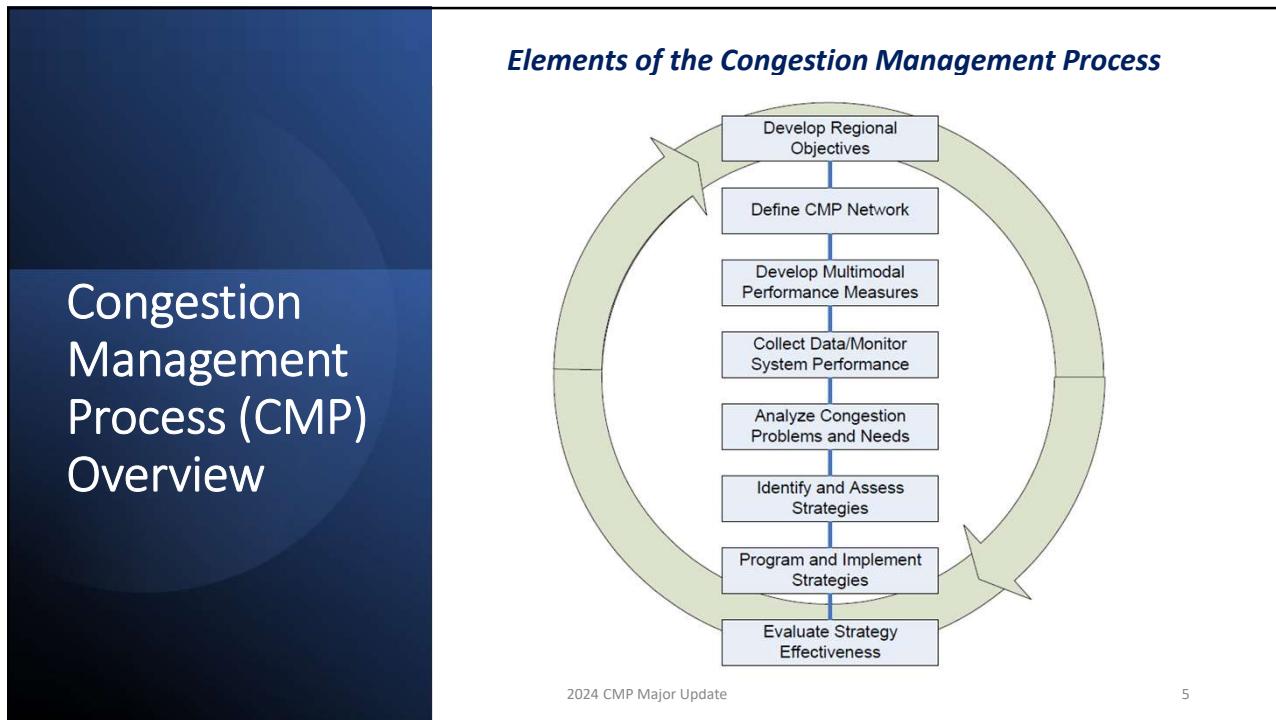

23 C.F.R. 450.322 states the CMP requirements for TMA MPOs as:

The transportation planning process in a TMA must address congestion management through a process that provides for safe and effective integrated management and operation of the multimodal transportation system, based on a cooperatively developed and implemented metropolitan-wide strategy of new and existing transportation facilities eligible for federal funding through the use of travel demand reduction, job access projects, and operational management strategies.

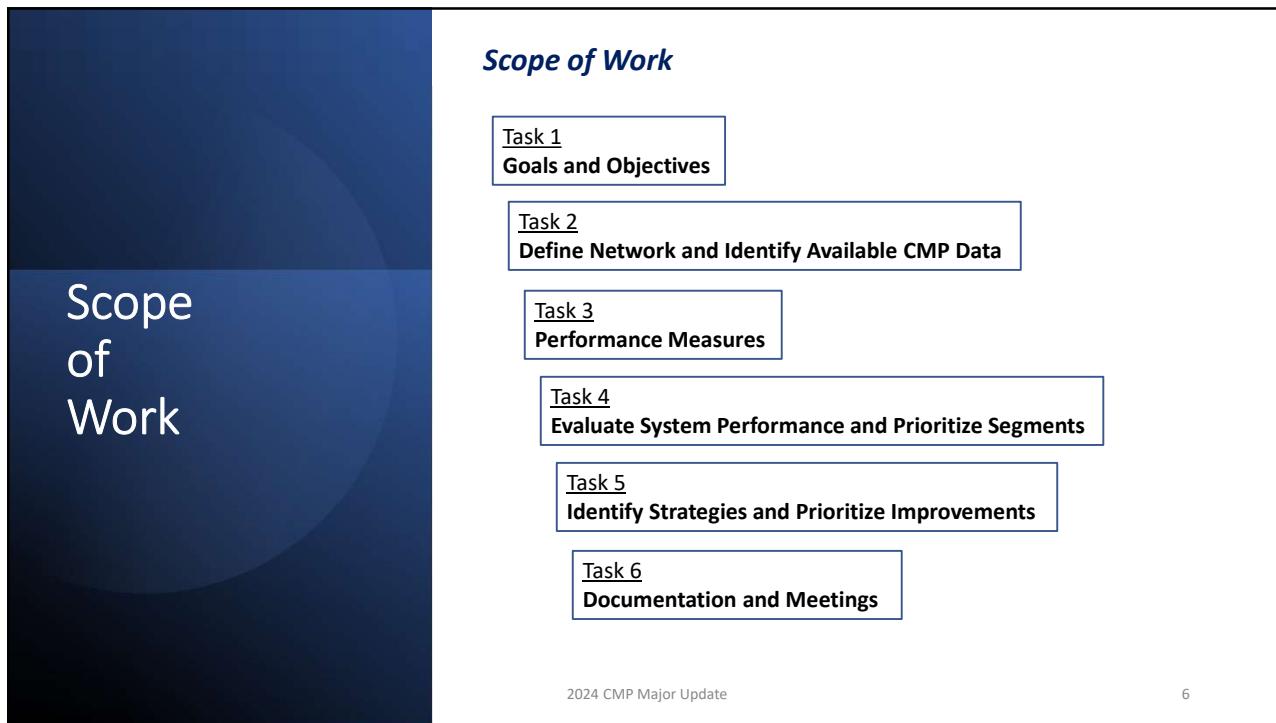

The development of a CMP should result in multimodal systems performance measures and strategies that can be reflected in the MPO's LRTP and TIP.

6

## CMP Goals

**CMP Goals – consistent with LRTP Directly or Indirectly**

- Goal 1**  
Support Economic Activities
- Goal 2**  
Provide Travel Choices
- Goal 3**  
Maintain the Transportation System
- Goal 4**  
Provide Equitable, Affordable, and Sustainable Urban Mobility
- Goal 5**  
Improve Safety and Security

2024 CMP Major Update

7

7

## Role of the Working Group

Define Goals

Contributes to the Collaborative Process

Provide Feedback

Identify Opportunities

Evaluate Performance

Acts as key stakeholders for the CMP

## CMP Network

**Network**

- Identify CMP Study Network
  - TCDMS Roadway Network
  - Exclude State Roads

The map displays the St. Lucie County CMP Roadway Study Network. It features a dense network of green lines representing the study network roads, primarily concentrated in the central and southern parts of the county. Red lines represent state roads, including major routes like US 1, SR 72, SR 78, SR 68, and SR 411. The map also shows various local roads and water bodies. A legend at the bottom left identifies the road types, and a north arrow is located in the bottom right corner.

Note: Segments with green highlight show higher V/C ratios than actual due to segmentation limits of the roadways.  
Note: Segments with grey highlights have projects in the TIP that will improve V/C and remove them from priority ranking.

Congestion Management Process

February 12, 2024

20

**Working Group Meeting #2**  
**Congestion Management Process**  
**April 22, 2024**  
**9:00 to 10:30**

**AGENDA**

- 1. Introductions**
- 2. Congestion Management Process (CMP) Overview**
- 3. Prioritized Congested Corridors**
- 4. Recommendations Workshop**
- 5. Next Steps**
- 6. Traffic Count Data Management System (TCDMS)**

## Sign-In Sheet

Working Group Meeting #2

Congestion Management Process

April 22, 2024

9:00 to 10:30

Name	Representing	Phone	e-Mail
Colt Schwerdt	City of Port St. Lucie		
Thomas Salvador	City of Port St. Lucie		
Emily Seitter	City of Port St. Lucie		
Antonio Balestieri	City of Port St. Lucie		
John Andrews	City of Fort Pierce		
Daniel Zrallack	St. Lucie County		
Patrick Dayan	St. Lucie County		
Yi Ding	St. Lucie TPO		
Steve Infanti	Benesch		
Rob Cursey	Benesch		

## Working Group Meeting #2

Congestion Management Process

1

## Working Group Agenda

Congestion Management  
Process (CMP) Overview

Prioritized Congested  
Corridors

Recommendations

Next Steps

2

## Congestion Management Process (CMP) Overview

**What is the Congestion Management Process?**

The Congestion Management Process (CMP) is a federally mandated process to help larger urban areas analyze and manage traffic congestion.

**What is the purpose of the CMP?**

The purpose of the CMP is to provide for effective management and operation of the existing transportation system and identify areas where improvements are most needed.
